## X COMPANY'S EAST DIVISION'S IT&C NETWORK PROJECT

### **MAJ Adrian CROITORU**

#### I. BUSINESS CASE

#### **I.1 Executive Summary**

X Company is extending to a new location, some 1000 km from its headquarters in one year.

This division is going to address the southern-east part of Europe.

The proposed number of people working there is about 100 divided into the same subdivisions as headquarters.

A building facility is in its final stage of construction. The constructor is going to provide some IT&C features, agreed five years ago, when the X Company decided to extend there and signed the contract to build an office facility.

#### **I.2 Business Opportunity**

Taking into account that the objectives of the company changed meanwhile, and the stage of the construction, the opportunity is to redesign the IT&C installation according to the nowadays and foreseen objectives of X Company and the newest technology on the today's IT&C market. By installing it properly it will give the X Company the opportunity to cut costs from the employees' travelling. Moreover, the new design will meet the standards to be interoperable with the IT&C installations in headquarters and the other divisions.

#### **I.3** Alternatives

1. Leave the constructor to install what was signed five years ago and let the people to work on it as it is. The services do not meet the actual requirements, but the five years ago needs. It is going to be a high demand of travelling to solve the X company business which will cost more the company.

2. Leave the constructor to install what was signed five years ago and then, based on the installation made, turn it into what is needed. Is going to cost more (another design, other civil works); it is more difficult to change an installation while working on it because the employee cannot do their job properly.

3. Stop the constructor to install the agreed telecom installations, amend the contract, and redesign the IT&C installation to meet the actual company needs and the new technology. This is the most cost and time effective alternative.

#### I.4 Benefits

Only one investment into a functional IT&C system that will save money:

- 1. Invest the money for the old agreed installation in the new one;
- 2. Add the new services as video-tele-conference (VTC) and collaborative tools to drastically reduce the need of travelling between the headquarters and this division and give the employers the opportunity and tolls to work efficiently;
- The IT&C technology is progressing and the need of the available bandwidth increases day by day, so a fibre optical based network is more appropriate for X Company to meet the needs it has and let space to develop new services;
- Integrate the new division from IT&C point of view with headquarter and other X Company's divisions.

#### I.5 Costs

The cost is approximately the same as stated into the initial contract that X Company signed five years ago for the telecommunication installations. Is going to be a minimal increase of costs related to the new services (VTC, collaborative tools), that will save money reducing the need to travel (travel cost, accommodation, per diem) in the first year.

### I.6 Financial Analysis

| Equipment   | Туре        | Initial plan | Cost   | New plan    | Cost   |
|-------------|-------------|--------------|--------|-------------|--------|
| Cabling     | Cat 5       | 1300 m       | 1.3k   | 400 m       | 1.8k   |
|             | FO          | -            | 0      | 1400 m      |        |
| Routing     | Router      | 1            | 2k     | 1           | 2k     |
| equipment   | Switch      | 3            | 4.5k   | 4           | 10k    |
| Workstation | Hardware    | 100          | 5k     | 100         | 5k     |
|             | Software    | 100          | 4k     | 100         | 5k     |
| Servers     | Hardware    | 9            | 100k   | 4           | 60k    |
|             | Software    | 12           | 12k    | 16          | 30k    |
| Storage     | Hardware    | -            | 0      | 2           | 20k    |
|             | Software    | -            | 0      | 2           | 2k     |
| Voice       | Switchboard | 1            | 4k     | -           | 0      |
| equipment   | Phone       | 100          | 1k     | -           | 0      |
|             | VoIP phone  | -            | 0      | 20          | 0.4k   |
|             | Soft phone  | -            | 0      | 80          | 1.6k   |
|             | Cable       | 1000m        | 1k     | 100m        | 0.2k   |
| VTC         | Equipment   | -            | 0      | 4           | 30k    |
| Leased line | Data        | 10 Mbps      | 2k     | 100 Mbps    | 2.5k   |
|             | Voice       | 2 Mbps       | 1k     | -           | 0      |
| Travel      |             | 5 a month    | 25k    | 1 a 2months | 5k     |
| Maintenance |             | A year       | 25k    | A year      | 20k    |
| TOTAL       |             |              | 187.8k |             | 204.5k |

#### **I.7** Assumptions

- 1. The contract with the X Company has been signed;
- 2. The structure of the new division is similar to that of the headquarters;
- 3. The needs in terms of communication are similar to other divisions that houses around 100 people;
- 4. There will be no changes in the X Company objectives in the next 1-2 years.

#### **I.8 Sensitivity Analysis**

Taking into account that every week the heads of services from each division have to meet their chiefs from headquarters for co-ordination, and there is a monthly meeting of the CEO with the divisions' heads, using the collaborative tools and the VTC provides the means not to travel. This saves time and money by achieving the same result as in a formal, old fashioned meeting in headquarter.

Moreover, using virtualization in the new plan, one set of servers and storage is used as hot reserve, which increases the availability of data in case of a disaster.

#### **II.1 Main goal**

The IT&C Company is going to provide X Company with a modern IT&C installation in the new built facility to cover the telecommunication related facilities in a secure and interoperable manner.

#### **II.2 Objectives**

- 1. In one year time, my company installs the IT&C installation so that as the division will have all needed services to reach its full working capacity.
- 2. In 6 months time, all cables will be installed in a structured cabling according to division needs.
- 3. In 7 months time, all networking equipment is going to be installed and configured.
- 4. In 8 months time all terminals composing the network will be installed and given the initial configuration.
- 5. In 10 months time, the server room will be equipped according to the needed services and all servers will be configured and integrated in the network; Final test of the local network.
- 6. In 11 months time, the division's network will be connected to that of headquarters; Final test of the network integrated in the X Company network have to take place.
- 7. The installation and configuration staff will give on site training for the appointed administrators so that as they have to be able to deal with what was installed there.

#### **III.1 Resource pool description**

The team that works for this project is composed of 16 people

The equipment planned to be installed during the project is presented in the next table:

| Equipment   | Туре       | Quantity |
|-------------|------------|----------|
| Cabling     | Cat 5      | 400 m    |
|             | FO         | 1400 m   |
| Routing     | Router     | 1 u.     |
| equipment   | Switch     | 4 u.     |
| Workstation | Hardware   | 100 u.   |
|             | Software   | 100 u.   |
| Servers     | Hardware   | 4 u.     |
|             | Software   | 16 u.    |
| Storage     | Hardware   | 2 u.     |
|             | Software   | 2 u.     |
| Voice       | VoIP phone | 20 u.    |
|             | Soft phone | 80 u.    |
| VTC         | Equipment  | 4 u.     |
| Leased line | Data       | 100 Mbps |

A more detailed view is presented in Appendix 1: Resources

#### III.2 WBS

The WBS consist of 13 activities, starting with the assembling the team, then defining the needs, acquisition of the equipment and materials, installation of cables and equipment, configuration of all equipment, testing the network locally and to the headquarters, training for the administrative staff ,and finally, the handover of the entire network to the X Company. A more detailed view is presented in Appendix 2: **WBS** 

The X Company's east division's IT&C network project will span on 201 days. Detailed activities' duration is presented in the Appendix 3: **Gantt chart**. Total cost of the project is: 321.692,61 Euro.

Total cost of equipment and material that will be used for the project is 204.500 Euro.

The cost estimate methods used for this project are: **order of magnitude** (the IT&C Company is dealing with such projects) and **budget estimate** (defined during the cost management process)

A more detailed view is presented in Appendix 4: Budget report.

- 1. Briefing about the signed contract. (Activity 1). Responsible: General Manager, legal advisor.
- All team members are gathered. (Activity 2). Responsible: General Manager, project manager.
  - a. Identify the team members according to the project needs;
  - b. All members are given a specific role.
- Have identified the IT&C needs of the division in a Site survey report. (Activity 3) Responsible: Project manager, Project engineer.
  - a. Identification of the connection method in place at headquarters;
  - b. Identification of the type of the used equipment;
  - c. Identification of the type of software the headquarters uses;
  - d. Identification of the server room;
  - e. Identification of the rooms allocated to each subdivision;
  - f. Identification of the needs of the equipment/materials for each room.
- 4. The **project manager** and the **project engineer** designs a **Proposal plan** to be submitted for formal approval to the headquarters IT&C board (**Activity 4**).
  - a. Design of a diagram based of the site surveys that have to consist of:
    - i. Division's plan;
    - ii. The path of the cable to be run;
    - iii. The equipment's position;
    - iv. The power supply's position.
- 5. The list of type, quantity and estimated cost of the equipment/materials to be purchased. (Activity 5) Responsible; Project engineer and project manager.
  - a. Write down a list of equipment to be installed to meet the requirements in the approved plan;
  - b. Count how much cable and how many servers, workstations, routers, switches are needed to install according to approved plan;
  - c. Determine the type of equipment to be installed in order to meet the requirements in the approved plan:
    - i. Technical characteristics;
    - ii. Features.
  - d. Write down a list that consists of type, number and foreseen cost for the needed materials/equipment.

- 6. Purchasing all equipment/materials needed. (Activity 6); Head acquisition and project engineer.
  - a. Write down the technical specification that each type of equipment/material have to meet;
  - b. Hold the biding;
  - c. Select the provider that meet the requirements from specification in a most costeffective manner;
  - d. Receive the equipment/materials from the selected provider;
  - e. Pay the agreed amount of money for the delivered equipment/materials.
- 7. Have **installed all the cable conduit, cables, sockets and patch panels** according to the approved diagram. (Activity 7); Responsible: Project engineer, **installation team leader.** 
  - a. Drill the walls according to the network diagram;
  - b. All cable conduit should be installed according to the plan;
  - c. All cables have to be installed inside the cable conduit;
  - d. All the needed sockets are installed for each room;
  - e. All patch panels are installed according to the approved plan;
  - f. The connectivity between sockets and patch panels has to be insured, the attenuation should be less than 0.1 dB on fibre optical and 0.2 dB on CAT 5 cable.
- 8. Have **installed and configured all the networking equipment** in order to permit connectivity among terminals and to the server room. (**Activity 8**), Responsible: Project engineer, **configuration team leader.** 
  - a. Install all routing equipment in the designed places;
  - b. Configure the routing equipment to meet the requirements in the approved plan;
  - c. All the routing equipment has to be connected. The ping should be less than 20ms.
- Have installed and configured all the terminals in order to have connectivity among terminals and to the server room. (Activity 9); Responsible: Project engineer, Installation and configuration team leaders.
  - a. The terminal equipment has to be installed in each room according to the approved plan;
  - b. Each equipment must have installed the operating system as a basic configuration;
  - c. All terminal equipment has to be reached from the networking equipment. Ping answers: less than 25ms.
- Have installed and configured all the servers in order to insure all designed services for the division's network. (Activity 10); Project engineer, Installation and configuration team leaders.

- a. The 3 racks are to be installed in the server room:
  - i. One for the interconnection equipment;
  - ii. One for the operational equipment;
  - iii. One for the back-up solution;
- b. The servers and storages are to be installed and connected so that as to meet the approved plan:
  - i. Two servers and storage are to be installed in the operational rack;
  - ii. The other set of two servers and a storage are to be installed in a the backup rack;
- c. Configuration of the installed equipment:
  - i. Install the virtualization software;
  - ii. Install the operating system on servers;
  - iii. Install the operating system on storages;
  - iv. Install the applications as needed.
- d. The installed and configured servers are to be connected to the server switch;
- e. Check the installed services from each terminal; the available services have to be accessed from each terminal.
- 11. Have the IT&C connectivity between the division and headquarters. (Activity 11);

Responsible: Project engineer, Installation and configuration team leaders.

- a. Receive and check the leased line:
  - i. the speed have to be 100Mbps;
  - ii. BER < 10E -8.
- b. Configure the installed routing equipment in order to insure the connection to the headquarters;
- c. Connect the leased line to the routing equipment;
- d. Test results:
  - i. The ping answers have to be less than 50ms;
  - ii. The speed has to be 100Mbps.
- 12. Every **service has to work reliable and without delay** inside the local network and over the WAN. (**Activity 12**); Project manager, project engineer, head of configuration team.
  - a. The average response for a ping in the connectivity test:
    - i. Inside local network < 20ms;
    - ii. To the headquarters' network<50ms.
  - b. Check the services from division's servers to headquarters';
    - i. The e-mail server communicates with the headquarters' server;

- ii. Global Address list is propagated among the e-mail servers.
- c. Check the services between the division's terminals and headquarters' terminals;
  - i. From every workstation have to be possible to work collaboratively on Microsoft Office software package.
- d. The VTC system have to work without any discrepancy between the image and sound;
  - i. No frizzing on the image;
  - ii. The sound have to be loud and clear;
- e. The VoIP system have to work properly:
  - i. The sound have to be loud and clear;
  - ii. No drops of signal have to occur in a 10 minutes long conversation;
- f. The onsite course have to be comprehensible so that as:
  - i. The administrators have to be able to reinstall al equipment and applications installed in the division;
  - ii. The administrators have all data to work with the telecom provider in order to fix the connectivity to the headquarters.

#### 13. The handover of the network have to meet the agreed contract. (Activity 13);

Responsible; Project manager.

- a. The handover documents are prepared by the project manager and the project engineer;
- b. The handover documents are signed by the project manager, the director of the division and one representative of the headquarters.

## **VII. COMMUNICATIONS MANAGEMENT PLAN**

| No | Stakeholders                                       | Туре             | When<br>(Phase)           | Expectation/concerns | Type of message                                  | Periodicity  |

#### VIII. RISK MANAGEMENT PLAN

#### VIII.1 Risk identification methodology

Documentation reviews, assumptions analysis, and brainstorming.

#### VIII.2 Risks:

1. Delay in having in time the necessary equipment and materials;

The acquisition manager is going to take this risk in order not to delay the beginning of the installation.

2. Risk of employees injuries;

All employees are insured by an insurance company.

3. Technology match the project;

The project engineer designs the network in accordance with what the X Company needs and to be interoperable with the headquarters network.

4. Maturity of technology;

The project manager and the project engineer design the new network based on a mature technology to avoid the unstable products being part in the network.

5. Technology experience of project team;

The team working for the project has the knowledge and all necesary skills to deal with the technology for the new network

6. Disaster recovery;

In the planning phase, the project manager and the project engineer plan to install one set of equipment as hot reserve to increase the availability of data in case of equipment failure. Moreover, the training at the final of installation will give the administrators all needed skills to deal with all installed equipment in all imagined conditions.

## Development and implementation of a communication system for an operational command in order to support execution of command and control act

## Lieutenant commander Neculai GRIGORE

#### **1. Project title**

Development and implementation of a communication system for an operational command in order to support execution of command and control act

#### 2. Project sponsor:

#### NATO Infrastructure Committee and Ministry of National Defense

#### **3.** Business case

Considering the challenges of the modern command and control act execution it is necessary to improve de communication capabilities of an operational command that have to implement new protocols and standards for voice, data, and video services.

The existing communication system of operational command is not capable to route and control automatically the information requested by the forces during the missions.

In this moment it is only possible to communicate only using the voice circuits and the number of modern equipments, capable to allow communications to the newest standards, are less than 20 % of total number of equipments necessary for planning communications circuits capable to assure the mentioned services.

The life-cycle of the existing equipments is at the end of the operation and maintenance period and the costs of maintaining in function of these represent 50% of a cost of implementation of the new one (considering the warranty period of the new one, availability of the spare parts and the cost of these old pieces) and the quality is remarkably different considering the modes of operation (voice, data, formatted messages against voice operation), the covered areas (short distance-national interest, log distance-strategic interest), the power of transmitters and the stability of communications (10 KW against 1 KW).

Supporting the forces executing missions at long distances requests high power and implementation of protocols that will offer the certainty of receiving of the information.

The integration of the existing equipments doesn't allow the planning of circuits, remote control of the equipments and the interconnection with the other national commands is substandard.

If the interoperability, projection of force having as result promotion of country and the standards implemented at the level the operational command are not a priority for Armed Forces, this system could not be implemented.

The lack of implementation will generate strong limitation of executing of command and control act, high costs (considering the warranty period costs, costs of spare parts) of maintaining in function of old equipments for a short period generated by lack of the spare parts, more expenses for communication personnel (lack of integration), unacceptable uncertainty of receiving of information at long distances confirm by users of the existing system and lack of network centric architecture representing the most important concept at the level of NATO and implemented in more countries of this alliance.

The results will be the poor information available for executing of forces command.

Development and implementation of this system will offer support for national land and air forces commands and NATO Headquarters through the interconnection between the communications systems.

Among the **main beneficiaries** of this project, one may mention the following:

- Ministry of National Defense
- NATO Headquarters in the Southern Region
- Romanian Naval Forces
- Other Services of Romanian Army

The project initiating team is envisaged to consist of the following individuals: 1 IT specialist, 1 IT security specialist, 1 COMSEC (Communication Security) specialist, 2 telecommunications specialists, 1 infrastructure specialist. However, the human resources for each activity will be explicitly mentioned in the Microsoft Project responsibility matrix. The overall cost is estimated at approximately 10,000,000 EURO, out of the human resources costs paid from military budget of Naval Forces.

The estimated implementation period of this project is: 05.01.2011 - 07.11.2012.

#### 4. Project scope management

#### 4.1. Project goal

**The project goal** is to develop and implement of a communication system for an operational command in order to support execution of command and control act.

#### 4.2. Project objectives

For the goal defined above, we identified the following objectives:

- 1. Accomplishing the electromagnetic compatibility study by the external company X until the 25 of March 2011
- 2. Approving of financing authorization document by NATO Authority until the beginning of June 2011.
- 3. Finalizing the acquisition procedure of the contract for implementation of the communication system by the end of August 2011.
- 4. Finalizing the acquisition procedure of the contract for infrastructure works by the end of August 2011.
- 5. Accomplishing of all infrastructure works until 15 of February 2012.
- 6. Installation of all components of the communication system by 24 of October 2012.
- 7. Execution of final acceptance of communication system by the end of the year 2012.

#### 4.3. Project activities and sub-activities corresponding to objectives

# O1. Accomplishing the electromagnetic compatibility study by the external company X until the 25 of March 2011

#### 1. Accomplishing of EMC study

- 1.1. Negotiate the conditions of collaboration
- 1.2. Site survey
- 1.3. Finalizing the first draft
- 1.4. Analyze the draft and sending the comments
- 1.5. Finalizing electromagnetic compatibility study

1.6. Delivery of the CEM study

# O2. Approving of financing authorization document by NATO Authority until the beginning of June 2011

#### 2. Approval of TBCE.

- 2.1. Finalizing the TBCE
- 2.2. Sustain TBCE
- 2.3. Approval procedure for TBCE
- 2.4. Delivery of TBCE to parties involved

# O3. Finalizing the acquisition procedure of the contract for implementation of the communication system by the end of August 2011

#### 3. Acquisition procedure for COMMS system

- 3.1. Development of documentation for acquisition
- 3.2. COMMS acquisition procedure
- 3.3. Signing the contract
- 3.4. Delivery of contract/extract to parties involved

# O4. Finalizing the acquisition procedure of the contract for infrastructure works by the end of August 2011

#### 4. Acquisition procedure for infrastructure works

- 4.1. Feasibility study
- 4.2. Approval of feasibility study
- 4.3. INFRA acquisition procedure
- 4.4. Signing the contract
- 4.5. Delivery of contract/extract to parties involved

#### O5. Accomplishing of all infrastructure works until 15 of February 2012

#### 5. Accomplishing of infrastructure works

#### O6. Installation of all components of the communication system by 24 of October 2012

#### 6. Installing of COMMS components

- 6.1. Development/delivery of equipments
- 6.2. Development/delivering of auxiliary equipments of subcontractors
- 6.3. Installation of the system
- 6.4. Information of parties involved

#### O7. Execution of final acceptance of communication system by the end of the year 2012

#### 7. Final acceptance procedure for the system

#### 4.4 Project deliverables

The project deliverables are presented in the chapter 8 together with the quality indicators, specifications and requirements for all of them.

#### 4.5 Project organization

Table 1. Stakeholders

### 5. Project Time Management

The start date and the end date of each activity and sub-activity are presented in the Gantt chart annexed to the hereby project.

For smoothly development of the project the terms for following milestones will be consider as a priority:

- 1. Delivery of the CEM study
- 2. Delivery of TBCE to parties involved
- 3. Delivery of contract/extract to parties involved
- 4. Delivery of contract/extract to parties involved
- 5. Information of parties involved

As this strategy to be possible it is necessary to pay attention to the tendency of the project environment to the bureaucracy that could generate delays.

#### 6. Human Resources Management

The human resources necessary during each phase of the project, as well as the corresponding costs are presented in the Microsoft Project sheet annexed to the hereby paper.

#### 7. Project Cost Management

The costs incurred by the hereby project are detailed in the Human Resources Costs Sheet annexed to the present project.

The cost for this project was estimated considering order of magnitude of the similar developed projects.

During the planning phase we will consider a budget estimate approach that should be more precise than the order of magnitude.

In case the cost of the project will be more than allocated, we have the possibility for overrunning procedure.

#### 8. Project Quality Management

Next, the deliverables and quality indicators are presented in connection to each objective and activity:

#### **OBJECTIVE NO.1 AND THE ACTIVITIES NO. 1 AND 1.1-1.5:**

#### 1. A complete study delivered by company X until 25 of March 2011 containing:

- a. **Configuration of antenna field**: number of antennas, types of antennas, polarization of each antenna, emission characteristics (horizontal and vertical), coverage areas, mutual influence, disposal
- b. **Mutual influence with systems in the proximity of disposals areas**: generated perturbations, level of the generated electromagnetic field, level of the natural electromagnetic field in the receiving area
- c. **Influence over the people**: the level of electromagnetic over the personnel areas, conformance with the national and international specific standards
- d. Interconnection of the antennas field with the hardware of the system
- e. **Configuration of the communication system:** emission site, receiving site, remote control system configuration, messaging system configuration
- f. Infrastructure works requested by system implementation

The review process will be accomplished by CIS Naval HQ Department between 14 of March and 18 of March 2011.

#### **OBJECTIVE NO.2 AND THE ACTIVITIES NO. 2 AND 2.1-2.3:**

- 2. An approved financing authorization document will be draw up by CIS Naval HQ Department between 28 of March and 20 of April 2011 and ,in accordance with Type B Cost Estimate Guide, will contain details about:
  - a. **Applied reference documents**: Minimum military requirements, Capability Package documents, Project Implementation Plan
  - b. Applied standards for every equipment/component: interoperability communication standards, specific standards for NATO Communications systems
  - c. **Implementation procedures**: adaptation of NATO requirements for locations chosen for implementation
  - d. Architecture of every component installed in each location: diagrams in accordance with NATO system target architecture
  - e. **Interdependencies:** identified interdependencies with existing systems and future intentions of the NATO
  - f. **Procurement strategy:** details referring to the acquisition procedure
  - g. Implementation milestones: specify the terms
  - h. **Expenditure profile:** estimate cash flow
  - i. **Cost breakdown structure:** an annex with all costs involved by the hardware, software, infrastructure, contingencies, initial logistic support

The review process will be accomplished by NATO communications specialists working group between 21 of April and 01 of June 2011.

#### **OBJECTIVE NO.3 AND THE ACTIVITIES NO. 3 AND 3.1-3.3:**

- **3.** A signed contract between acquisition authority and the contractor will be delivered until 31 of August 2011 and will contain details about:
  - a. Conditions and responsibilities of the parties: IAW procedure AC 2261
  - b. Annexes with templates for all documents involved in life-cycle of the system : according to chosen procedure

c. **Technical documentation**: as approved in the financing document and detailed in the scope statement

The review process will be accomplished by acquisition authority between 02 of June 2011 and 24 of August 2011.

Between 02 of June 2011 and 13 of July 2011 the CIS Naval HQ Department will develop statement of work.

#### **OBJECTIVE NO.4 AND THE ACTIVITIES NO. 4 AND 4.1-4.4:**

- 4. A signed contract between acquisition authority and the contractor will be delivered until 31 of August 2011 and will contain details about:
  - a. **Conditions and responsibilities of the parties**: IAW national procedure OUG 34/2006
  - b. Annexes with templates for all documents involved in life-cycle of the system : according to chosen procedure
  - c. **Technical documentation**: as approved in the financing document and detailed in the scope statement, feasibility study.

The review process will be accomplished by acquisition authority between 21 of April 2011 and 24 of August 2011.

Between 21 of April 2011 and 13 of July 2011the Infrastructure Directorate will develop feasibility study and statement of work.

#### **OBJECTIVE NO.5 AND THE ACTIVITY NO. 5:**

- **1. Improvement of the surface of the sites (removing of trees, bushes and leveling the site):** according to the requests resulted from the CEM study
- 2. Building a fence: barbed wire fence, two meters high, amagnetic material
- **3. Improvement of antennas basement:** according to the specifications and operation modes of each antenna specified in the CEM study
- **4.** Digging and executing the cableware for antennas, power supply cables: according to the positions resulted from CEM study and the needs to have access to the potential damages wires ( 50 meters between visit holes, wires protecting tubes, 1 meter deep)
- 5. **Rebuilding the existing build, power supply system:** according to the requested room and power supply for all components of the COMMS system specified in the offer of the contract
- **6. Implement external CATV system:** the video cameras will have auto video recording capability, 360°, external operation, water, dust and salt proof, wired interconnected with a local surveillance system

The review process will be accomplished by acquisition authority and CIS Naval HQ Department all over the period.

The infrastructure works will be executed by the company Y until 15 of February of 2012.

|     |                       |          | using the available channels     |

Table 2. Deliverables and quality indicators for communications sites

The review process will be accomplished by acquisition authority and CIS Naval HQ Department all over the period.

The installing works will be executed by the company Z until 24 of October of 2012.

#### **OBJECTIVE NO.7 AND THE ACTIVITY NO.7**

Deliverables of this activity will contain alliance and national standardized documents referring to the security accreditation, final reception of deliverables and acceptance of the system.

The review process will be accomplished by acquisition authority, alliance authorities and CIS Naval HQ Department all over the period.

The final acceptance procedure will be executed by acquisition authority, alliance authorities and CIS Naval HQ Department and the company Z until 07 of November of 2012.

### 9. Risk Management Plan

For the smooth running of the project, we have identified some of the risks that may hamper the activities to various degrees:

| No.                     | Risk name                                  | Risk description  | Risk<br>level | Risk approach  |  |  |  |  |
|-------------------------|--|---|---------------|--|--|--|--|--|
|                         | Mission and Goals                          |   |               |  |  |  |  |  |
| 1.                      | Project fit to<br>customer<br>organization | The project does<br>not support or<br>relate to customer<br>goal          | Low           | The system will be developed in<br>accordance with NATO and<br>Naval Forces MMR and target<br>architecture   |  |  |  |  |
| 2.                      | Project fit to<br>provider<br>organization | The project does<br>not support or<br>relate to provider<br>goal          | Low           | During the acquisition procedure<br>will be chosen only the<br>companies that developed<br>similar projects  |  |  |  |  |
| 3.                      | Customer perception                        | Customer expects<br>this organization to<br>provide the system<br>on time | Medium        | The planning of cash flow and<br>execution of the activities will be<br>considered as a priority   |  |  |  |  |
| 4.                      | Work flow                                  | Changes that could<br>affect the work<br>flow                             | Medium        | The end user representatives will<br>monitor and will report to<br>project manager changes that<br>could generate delays   |  |  |  |  |
|                         |  | Decision  | Drivers       |  |  |  |  |  |
| 5.                      | Political influences                       | Particular<br>politically-driven<br>choices being made                    | Low           | The implementation of the system is totally agreed and approved by the sponsors  |  |  |  |  |
| 6.                      | Convenient date                            | The process of<br>establishing the<br>date for delivery                   | Low           | Delivery date for delivery of the<br>deliverables was made on the<br>beginning of the project<br>considering the prior experience<br>in similar activities. All details<br>are stipulated in the contract. |  |  |  |  |
| Organization management |  |   |               |  |  |  |  |  |
| 7.                      | Organization<br>stability                  | Changes in the<br>management<br>structure                                 | Low           | Members of organization are<br>well prepared for the tasks<br>allocated to them  |  |  |  |  |
| No. | Risk name                                     | Risk description   | Risk<br>level | Risk approach   |
|-----|---|--|---------------|---|
| 8.  | Organization<br>roles and<br>responsibilities | Understanding of<br>own roles and<br>responsibilities and<br>those of others by<br>the members of<br>structure | Low           | Monthly discussions with the<br>members of structure. Members<br>of organization are well prepared<br>for the tasks allocated to them.                                  |
| 9.  | Projects<br>objectives                        | Verifiable project,<br>objectives,<br>reasonable<br>requirements   | Low           | Review scope statement  |
|     |   | Us   | ers           |   |
| 10. | User<br>involvement                           | Not involved in the training process   | Low           | During the project development training periods are planned   |
| 11. | User experience                               | Users have no<br>previous experience<br>with similar<br>projects   | Low           | The users work and are trained on similar equipments  |
| 12. | User acceptance                               | Users accept most<br>of concepts and<br>details of system;   | Low           | The initial details are accomplished together with end users  |
| 13. | User training<br>needs                        | User training needs consider   | Low           | During the project development<br>training periods are planned. I<br>will ask for including of notions<br>in the normal training process of<br>communication personnel. |
| 14. | User<br>justification                         | User justification complete  | Low           | The system is developed<br>accordingly to the approved<br>architecture  |
|     |   | Project cha  | racteristic   | s   |
| 15. | Project size                                  | Medium, moderate<br>complexity,<br>decomposable  | Medium        | The scope statement will contain<br>as much as possible details. The<br>control and monitoring of the<br>activities will be a priority.                                 |
| 16. | Budget<br>Constraints                         | The role of<br>allocation of budget<br>for the project   | Low           | The costs are established considering similar systems. The budget is sufficient.  |
|     |   | Product  | content       |   |
| 17. | Requirements stability                        | Some change<br>expected against<br>approved set  | Low           | The architecture is clear and the<br>control and monitoring process<br>will support good decision   |
| 18. | Testability                                   | Parts of product to test   | Low           | Will be approved only the<br>equipments with certificates<br>mentioning the tests results   |
| 19. | Design<br>difficulty                          | Well defined interfaces  | Low           | All interfaces are define initially   |

| No. | Risk name                             | Risk description                                    | Risk<br>level | Risk approach  |  |  |  |  |  |
|-----|---------------------------------------|---|---------------|--|--|--|--|--|--|
| 20. | Implementation<br>difficulty          | Content is<br>reasonable for the<br>teams           | Medium        | The specific conditions for<br>implementation will be<br>presented initially and all details<br>of equipments will be presented<br>to the team   |  |  |  |  |  |
| 21. | System dependencies                   | Clear defined dependencies                          | Low           | All interdependencies are<br>considered initially and<br>mentioned in the TBCE   |  |  |  |  |  |
|     |                                       | Developme   | ent process   |  |  |  |  |  |  |

| 23. | Quality<br>assurance<br>approach      | Procedures<br>establish, but not<br>well followed   | Medium        | Implement SOP.   |  |  |  |  |  |
| 24. | Early<br>Identification of<br>defects | Team expects to<br>find all defects with<br>testing | Medium        | It is planned to test implemented modules  |  |  |  |  |  |
| 25. | Defect tracking                       | Defect tracking process in place                    | Medium        | Control and monitoring will assure remedial on time  |  |  |  |  |  |
|     |                                       | Development   | environm      | ent  |  |  |  |  |  |
| 26. | Physical facilities                   | Some modifications<br>needs, some<br>existent       | Medium        | The list of works will be planned initially  |  |  |  |  |  |
| 27. | Tools<br>availability                 | Lack of electrical power supply                     | Medium        | Will be used existing system and<br>in parallel will be developed the<br>new system.   |  |  |  |  |  |
| 28. | Disaster<br>recovery                  | Data security, back<br>up of system                 | Low           | All people involved in the<br>project will sign an confidential<br>paper; A back up will be perform<br>after each phase and a general<br>back will be made after the<br>project will be finish |  |  |  |  |  |
|     |                                       | Maintenance   | and suppo     | ort  |  |  |  |  |  |
| 29. | Design<br>complexity                  | Easily maintained                                   | Low           | Issue maintenance handbooks.<br>The system will be deliver with<br>maintenance tools   |  |  |  |  |  |
| 30. | Support<br>personnel                  | Sufficient numbers                                  | Low           | Establish the precise numbers of employees needed to be train  |  |  |  |  |  |
| 31. | Vendor support                        | Complete support at reasonable price                | Low           | Establish at the beginning the warranty period   |  |  |  |  |  |

Table 3. Project risks – name, description, level, approach

# **10.** Communication plan matrix

For the purpose of successful project implementation, various communication lines and methods have been suggested, as the attached table shows.

The communication plan has as main objective the avoiding of delays generated by bureaucracy. For this reason the project manager will plan the exchanging in time of interest information to all stakeholders to cover the effects of the following main risks.

| No. | Risk name                    | Risk description  | Risk<br>level | Risk approach  |  |  |  |  |
|-----|------------------------------|---|---------------|--|--|--|--|--|
| 1.  | Customer<br>perception       | Customer expects<br>this organization to<br>provide the system<br>on time | Medium        | Project manager will deliver all<br>requests in proper time for<br>accomplishing the phases of the<br>project. The planning of cash<br>flow and execution of the<br>activities will be considered as a<br>priority   |  |  |  |  |
| 2.  | Work flow                    | Changes that could<br>affect the work<br>flow                             | Medium        | Project manager will plan<br>meetings/VTC weekly to avoid<br>potential changes. The end user<br>representatives will monitor and<br>will report to project manager<br>changes that could generate<br>delays  |  |  |  |  |
| 3.  | Project size                 | Medium, moderate<br>complexity,<br>decomposable                           | Medium        | Project manger will be in contact<br>with experts and during the<br>planning phase he will consider<br>all recommendations of them.<br>The scope statement will contain<br>as much as possible details. The<br>control and monitoring of the<br>activities will be a priority. |  |  |  |  |
| 4.  | Implementation<br>difficulty | Content is<br>reasonable for the<br>teams                                 | Medium        | Project manager and experts will<br>present to the team the specific<br>conditions for implementation<br>and all details of equipments   |  |  |  |  |

# REPAIRING AND MODERNIZING A BUILDING PROJECT

# **MAJ Radu-Adrian MANDACHE**

# **1. PROJECT TITLE**

Repairing and modernizing a building

# **2. PROJECT SPONSOR:**

# Land Forces Academy "Nicolae Balcescu" Sibiu

# **3. BUSINESS CASE**

Land Forces Academy needs more modern accommodation rooms for our post graduate students because, in this moment, it has no sufficient and good conditions to put up they. So, the command team decided to modernize an old but strong large building (a bloc of bedrooms) from our unit. This old building has large rooms in bad conditions, only one bathroom on the floor, very old water and electrical supply devices and a roof in very bad condition.

Our academy has just developed three master programs during this year. In the same time, the number of students on direct filiera has abruptly increased and the accommodation space has become insufficient for students and post graduate students in the same time. It's compulsory to put up the military students (the cadets). In that situation, the post graduate students, their parents and their relatives, become disenchanted with the quality of life and instruction provided by the academy.

The frequency and the severity of the problem are very high because, in every weekend, a lot of post graduate students demand to be put up in accommodation rooms. On the other hand, their demands are to live one or two at most persons in a bedroom and not twenty persons in undesirable bedroom as the case is right now. In conclusion, they demand to live maximum two persons on accommodation room and have good conditions for live and study there.

If the accommodation conditions not improve, the image of the academy will be affected and the number of the post graduate students will abruptly decrease. The need of the academy is to increase the number of students and post graduate students, to gain a bigger part of market and consolidate its position.

Students need to have good accommodation conditions – maximum two people in the bedroom, separately bathroom, and a space for study, access to the internet, a refrigerator in the accommodation room, TV set and access to the fitness hall.

So, the problem is very important from the institution (sponsor) perspective. In conclusion, the command team requests me to make a project for modernize an old bloc of bedrooms.

The project importance resides with the following aspects:

- Provide the necessary accommodation room for all post graduate students of the academy;
- Create better conditions to learn and life all post graduate students of the academy;
- Increase academy's image capital inside de European military academic community.

Among the **main beneficiaries** of this project, one may mention the following:

- Land Forces Services;
- Land Forces Academy;
- post graduate students;
- military units from where are the post graduate students;

- local authorities;
- owners of the buildings from vicinity.

The project initiators consider that the project is currently affecting post graduate students from the Land Forces Academy "Nicolae Balcescu" Sibiu.

The academy assumes full responsibility concerning the quality and timeliness of the project activities.

The project team is envisaged to consist of the following individuals: 1 project manager, 1 executive director (buildings administrator), 2 team leaders, 1 communication team representative, 1 P.P.B.E.S. Officer, 1 Acquisitions manager, 2 Acquisitions specialists, 1 finance specialist (accountant), 2 consultants, 1 specialist – CO, specialist – NCO, 2 specialists – civilians, 1 secretary, 2 administrative peoples - NCO, 2 administrative peoples – civilians, 1 logistician (Officer with the materials).

However, the HR for each activity will be explicitly mentioned in the Microsoft Project responsibility matrix. The overall cost is estimated at approximately 969,589 RON (\$267,371), out of which the HR costs rise to a rough amount of 371,236 RON (\$102,371).

The estimated implementation period of this project is: 01.02.2011 – 16.09.2011.

# **4. SCOPE STATEMENT**

### 4.1 Main goal

Land Forces Academy will repair and modernize a building to have sufficient accommodation rooms with good living conditions and study for its post graduate students.

### 4.2 Objectives

- 1. By mid of February 2011, the Land Forces Academy will finish mission analysis for repair and modernize the building.
- 2. By the end of February 2011, the Land Forces Academy will finish investment analysis.
- 3. By mid of April 2011, the Land Forces Academy will obtain all approvals from the superior echelon and local authorities and necessary funds.

- 4. By the end of May 2011, the academy will finish the acquisition process for services of the company/companies that will repair and modernize the building.
- 5. By the end of June 2011, all constructor works in "gray" phase will be done by the company.
- 6. By the end of August 2011, works related to electrical, water and heating installation, interior and exterior will be done by the company.
- By mid of September 2011, the reception forms will be signed by company and Land Forces Academy representatives.

# 4.3 Project activities and sub-activities corresponding to objectives

O1. By mid of February 2011, the Land Forces Academy will finish mission analysis for repair and modernize the building

# 1.1. Mission analysis

- 1.1.1. Identify Projected Demand for Services
- 1.1.2. Identify Technological Opportunities
- 1.1.3. Identify Projected Supply of Services
- 1.1.4. Mission Needs Analysis and Assessment
- 1.1.5. Initial Requirements Definition

# O2. By the end of February 2011, the Land Forces Academy will finish investment analysis

# 2.1. Investment analysis

- 2.1.1. Initial Investment Decision
  - 2.1.1.1. Planning
  - 2.1.1.2. Analysis
  - 2.1.1.3. Documentation
- 2.1.2. Final Investment Decision
  - 2.1.2.1. Planning
  - 2.1.2.2. Analysis
  - 2.1.2.3. Documentation
- 2.1.3. Rebase line Decision
- 2.1.4. Final decision

O3. By mid of April 2011, the Land Forces Academy will obtain all approvals from the superior echelon and local authorities and necessary funds

# 3.1. Develop and field Report of necessity for repair and modernize the building

- 3.1.1. Detail Background note for repair and modernize the building
- 3.1.2. Develop Report of necessity for repair and modernize the building
- 3.1.3. Field Report of necessity for repair and modernize the building

# **3.2. Develop and field Investment sheet**

- 3.2.1. Develop Investment sheet
- 3.2.2. Field Investment sheet

# 3.3. Send Report of necessity and Investment sheet to the superior echelon

# **3.4. Develop and field project for Municipality Hall**

- 3.4.1. Develop project for Municipality Hall
- 3.4.2. Field project for Municipality Hall

# 3.5. Obtain the environmental permit

- **3.6.** Obtain the electricity permit
- **3.7.** Obtain the notice of the water-channel
- 3.8. Develop and field request for Municipality Hall

# 3.9. Keep in touch with superior echelon and local authorities

- 3.9.1. Keep in touch with superior echelon
- 3.9.2. Keep in touch with local authorities

# 3.10. Obtain all approvals from the superior echelon and local authorities

- 3.10.1. Obtain all approvals from the superior echelon
- 3.10.2. Obtain all approvals from the local authorities
- 3.10.3. Send Project for Municipality Hall
- 3.10.4. Obtain the approval from the Municipality Hall
- 3.10.5. Municipality Hall response

# 3.11. Obtain necessary funds for project

- 3.11.1. Develop a Background note to get money in the budget
- 3.11.2. Field and send a Background note to get money in the budget
- 3.11.3. Keep in touch with P.P.B.E.S. from superior echelon
- 3.11.4. Get a new budget that contain sufficient budgetary provisions for building modernize
- 3.11.5. Getting the funds

O4. By the end of May 2011, the academy will finish the acquisition process for services of the company/companies that will repair and modernize the building

# 4.1. Develop and field Report of necessity for acquisition of service

4.1.1. Develop Report of necessity for acquisition

4.1.2. Field Report of necessity for acquisition

## 4.2. Introduce the service in the Annual Procurement Program

# **4.3.** Develop and field the Specification

4.3.1. Develop the Specification

4.3.2. Field the Specification

# 4.4. Develop and field the Grade estimation for establishing the acquisition procedure

- 4.4.1. Develop the Grade estimation for establishing the acquisition procedure
- 4.4.2. Field the Grade estimation for establishing the acquisition procedure

## 4.5. Develop and field the Note evidence regarding to choosing the acquisition procedure

4.5.1. Develop the Note evidence regarding to choosing the acquisition procedure

4.5.2. Field the Note evidence regarding to choosing the acquisition procedure

# 4.6. Develop and field the Note evidence regarding to establishing qualification requirements

4.6.1. Develop the Note evidence regarding to establishing qualification requirements

4.6.2. Field the Note evidence regarding to establishing qualification requirements

### 4.7. Develop and field the Tender documentation

4.7.1. Develop the Tender documentation

4.7.2. Field the Tender documentation

## **4.8.** Publish Call for papers in Public Acquisition Electronic System

## **4.9.** Submitting applications (offers)

**4.10.** Open applications (offers)

**4.11. Evaluate applications (offers)** 

4.12. Develop and field Report procedure

4.13. Communicate the result of procedure

4.14. Solve possible appeal

4.15. Sign the contract with the winner company

4.16. Make acquisition file

O5. By the end of June 2011, all constructor works in "gray" phase will be done by the company

# 5.1. Repair the roof

- 5.1.1. Scraping the old roof
- 5.1.2. Install new roof

# 5.2. Achieve new space repartitioning

- 5.2.1. Dismantling the old plumbing (installation of water supply and sanitation; heating installation) and electrical installation
- 5.2.2. Demolish interior walls (less of the resistance walls)
- 5.2.3. Frame interior walls

O6. By the end of August 2011, works related to electrical, water and heating installation, interior and exterior will be done by the company

# 6.1. Plumbing

- 6.1.1. Install water lines
- 6.1.2. Setting sanitary
- 6.1.3. Setting heating installation

# 6.2. Electrical

- 6.2.1. Install wiring
- 6.2.2. Install outlets/switches

# 6.3. Interior

- 6.3.1. Install drywall on the ceiling and walls
- 6.3.2. Carrying out carpentry work
- 6.3.3. Install carpets
- 6.3.4. Install painting

# 6.4. Exterior

- 6.4.1. Repairing façade
- 6.4.2. Isolating facade
- 6.4.3. Painting façade

# *O7. By mid of September 2011, the reception forms will be signed by company and Land Forces Academy representatives*

- 7.1. Make initial reception
- 7.2. Sign the initial reception forms
- 7.3. Remedy any problems
- 7.4. Make final reception
- 7.5. Sign the final reception forms
- 7.6. Pay money for work

# **5. RESOURCES MANAGEMENT**

The human resources necessary during each phase of the project, as well as the corresponding costs are presented in the Microsoft Project sheets annexed (Appendix 1 and 2) to the hereby paper.

# 6. TIME MANAGEMENT PLAN

The start date and the end date of each activity and sub-activity are presented in the Gantt chart annexed (Appendix 3) to the hereby project.

# 7. COST MANAGEMENT PLAN

The costs incurred by the hereby project are detailed in the Resources Costs Sheet annexed (Appendix 4) to the present project.

# 8. QUALITY MANAGEMENT PLAN

Next, the deliverables and quality indicators are presented in connection to each activity:

| ID | Code<br>of<br>activity | Deliverables   | *Nature | **Type     | Responsible                       |
|----|------------------------|--|---------|------------|-----------------------------------|
| 0  | 1                      | 2  | 3       | 4          | 5                                 |

 Table no.1 - Project communications plan matrix

# **10. RISK MANAGEMENT PLAN**

For the smooth running of the project, we have identified some of the risks that may hamper the activities to various degrees:

| Risk name   | <b>Risk description</b>  | Risk<br>level | Risk approach  |
|---|--|---------------|--|
| Project<br>management<br>experience   | Project manager has little<br>experience with similar<br>projects and is new to<br>project management          | High          | Foster communication and<br>empowerment inside the<br>project team to secure<br>collective support                             |
| Conflict within project team  | Communication problems<br>among team members   | Low           | Organize briefings and<br>brainstorming sessions to<br>enhance exchange of ideas<br>(vertical and horizontal<br>communication) |
| Management<br>support   | Management team do not support research process  | Low           | Regularly inform<br>management team on research<br>progress and impact   |
| Lack of resources   | No funding received  | High          | Resubmit project proposal to other funding bodies  |
| Negative<br>influences  | Variety of negative<br>influences impacting<br>stakeholders' morale  | High          | Bottom-up communication<br>with stakeholders to foster<br>idea sharing and progress<br>informing                               |
| Interdepartmental interdependencies   | Other departments may not support the project team   | Medium        | Organize briefings to explain<br>the benefits of the project for<br>the entire organization                                    |
| Company project<br>manager that will<br>run the building<br>modernization<br>experience | Company project manager<br>has average experience<br>with similar projects and is<br>new to project management | Medium        | Foster communication and<br>empowerment inside the<br>company team to secure<br>collective support.                            |

# Researches about Modelling, Simulation of Operation and Optimization of a.c-a.c. Switch Mode Electronic Conversion Systems

# Lecturer Ecaterina Liliana MIRON, PhD

# **Project name:**

Researches about Modelling, Simulation of Operation and Optimization of c.a.c.a. Switch Mode Electronic Conversion Systems

# **Project sponsor:**

National Council of University Scientific Research (CNCSIS)

# I. BUSINESS CASE

# **Current situation**

The conversion of electrical energy from one to another form (alternating current – direct current, direct current – direct current, direct current – alternating current and alternating current – alternating current) had a new stage of development with the large usage of switch mode conversion electronic equipments. The switch mode power converters permitted the construction of power sources with high energetic parameters, which are reliable, light and small and in according to international regulation for the electrical energy quality.

In ac-ac switch mode converters, the conversion of energy is realized with the next modality of semiconductor devices command

- 1. Phase control
- 2. On-Off control
- 3. PWM technique (chopper)

The circuits with phase control and on-off control utilize the triacs and SCRs. These are studied and utilized on the large area. About the circuits with transistors (PWM) it can't say the same things, even if these have some advantage in accord of efficiency and power factor. The disadvantages of the PWM schemes are the problems of correct and sure command of their semiconductor devices.

The reduction of power consumption is one of the actual priorities. The international basic tendency is to optimize and to update the supply techniques for the protection of the ambient and to develop the alternative power supply too. In this respect, some papers at the national and international level are presented:

- Multilevel converters with high energetic parameters", author Dan Floricău, Review of Science Politic and Scientometry Special number, 2005 ISSN- 1582-1218;

# Solutions

The proposed study of optimization and modeling of ac-ac switch mode power supply with transistors (PWM) wants to be a chapter of the international research for development of the ac-ac conversion circuits with implication for energetic parameters.

Because in most of activity areas, the existing equipments ask power supplies with an ac-ac conversion section, the study proposes to develop <u>a facile design method of switch mode</u>

<u>power supply</u> and a selection method of ac-ac converters structural circuits in function of the asked application.

In context of the area development where the ac-ac energy conversion is made in too steps: ac-dc and dc-ac, the study removes the stage of transition on dc step with keeping the all consequence:

1. The necessity to realize a method of calculus of electrical quantities values from converter circuits, in transient state and steady state too.

2. The necessity to develop the performing models (the element of novelty of study) which can be use in simulation of ac-ac switch mode converters operation using dedicated programs: PSpice, MatLAB

The development of informatics systems has a major influence concerning all activities area, including the control of electrical and electronically equipments. In that way, the control and command of actual switch mode converters is implemented in a performance manner using microprocessor based systems. The subject of proposed study has in view the analyze and the implementation of the control and assistant command in ac-ac switch mode electronic converters.

# The project novelty

Resides in the development of virtual models for the ac-ac (switch mode) conversion schemes with transistors, with PWM and APWM command. Another novelty is the development of control and assists command programs of the ac-ac (switch mode) conversion schemes with transistors.

# **Project feasibility**

The scientific demarche projected is framed in the zone areas of boundary domains, having as important stages in his scroll:

1. The modeling and the operation simulation of the AC-AC (switch mode) converters with transistors;

2.The control and the assisted command of the AC-AC (switch mode) converters with transistors;

3.The optimization of the performances of the AC-AC (switch mode) converters with transistors.

The discussion of the project feasibility must take into account the novelty degree of the research study from conceptual point of view, which consists in virtual model realization of ac-ac switch mode converters. The solution of this objective, the mathematical modelling of
function stages of the ac-ac (switch mode) converters with transistors, is a realistic solution drives to the results gated closer to one real.

### II. PROJECT SCOPE MANAGEMENT

### II.1. Project goal

The project visas the elaboration of a mathematical model of c.a.-c.a. switch mode converters operation, respective a virtual model for their physical structure, able to achieve same functions as the classical models.

The finality of the project drives to the implementation of an automatic adjusting method of the power transfer at optimal parameters through computer assisted command.

### II.2. Project objectives

For the goal defined above, we identified the following objectives:

- 1. The elaboration of mathematical models of the ac-ac (switch mode) conversion schemes with transistors, with PWM command.
- 2. The elaboration of mathematical models of the ac-ac (switch mode) conversion schemes with transistors, with APWM command.
- 3. The development of virtual models for the ac-ac (switch mode) conversion schemes with transistors, with PWM command.
- 4. The development of virtual models for the ac-ac (switch mode) conversion schemes with transistors, with APWM command.
- 5. The verification of the models of ac-ac (switch mode) conversion schemes with transistors.
- 6. The development of control and assist command programs of the ac-ac (switch mode) conversion schemes with transistors.
- 7. The performances optimization of the ac-ac (switch mode) conversion schemes with transistors.

The team members have studies and achievements in switch mode power area with encouraging results, as examples, the doctoral thesis and some papers:

Thesis: Contributions in ac Voltage Regulators Study and Designing Using in Temperature Control Systems, author Ecaterina-Liliana Miron

### Papers:

About MathCAD Modeling of Buck PWM AC Regulators, authors: Miron L, Miron M, C.G. Constantinescu 8<sup>th</sup> International Conference on Applied and Theoretical Electricity ICATE 2006

### Why these objectives?

The reason can be the one which results from the necessity of comparative analyse of both types of commands (PWM, APWM) with taking into account the energetic parameters from the conversion scheme output. The first type of command is found in specialized literature with preponderance to dc-dc switch conversion schemes and there are references in ac-ac switch conversions schemes. The second type, APWM, is found in few papers and researches. As a result of proposed analyze it want to find some modalities to implement this command. Finality of the research theme is the one to optimize and to facilitate the design activity. This signifies existence of another reason for the mentioned objectives.

### **III. HUMAN RESOURCES MANAGEMENT**

The project initiating team is envisaged to consist of the following individuals: specialist in mathematics, simulation, PSpice, power transfer and programming in the different programs. The human resources necessary during each phase of the project, as well as the corresponding costs are presented in the Microsoft Project sheet annexed to the hereby paper, *appendix 2*.

### IV. PROJECT COST MANAGEMENT

The total amount of money needed for this project is: 92360 dollars.

The total amount is justified by the elimination of the linear variation of the project. The linear variation was eliminated for the shorten of the project, although the costs grow by increasing team of each activities and sub activities.

The costs incurred by the hereby project are detailed in the Human Resources Costs Sheet annexed to the present project, *appendix 3*.

## V. PROJECT QUALITY MANAGEMENT

Next, the deliverables and quality indicators are presented in connection to each activity:

| Deliverables  | Quality and review  | Associated activities           |
|---|---|---------------------------------|
| 1. mathematical models of the<br>different ac-ac conversion<br>schemes with transistors, with<br>PWM command        | Quality of human resources<br>specialist in: mathematics<br>(MathCAD), simulation<br>(PSpice),  | 1.1.1<br>1.1.2                  |
| 2. programs for assisted<br>simulation of ac-ac converters<br>with transistors and PWM<br>command                   | The comparison of the<br>waveforms of the simulating and<br>experimental results shows a<br>match between results by<br>applying the methodology to be<br>found in appendix 1 | 1.1.3 quality<br>1.5.1          |
| 3. mathematical models of the<br>different ac-ac conversion<br>schemes with transistors, with<br>APWM command       | Quality of human resources<br>specialist in: mathematics<br>(MathCAD), simulation<br>(PSpice),  | 1.2.1<br>1.2.2                  |

For the smooth running of the project, we have identified some of the risks that may hamper

Table 3. Project risks – name, description, level, approach

### VII. COMMUNICATION PLAN

For the purpose of successful project implementation, various communication lines and methods have been suggested, as the following diagram shows:

### **APPENDIX 1**

### Methodology of the research

The essential step of the ac-ac conversion study is constituted by the method determining of the conversion circuit power transfer to the load. This is the first point of the solution algorithm of the proposed objectives that are presented at the beginning. During the study will be utilized three research methods: quantitative, qualitative and experimental, which are combined for the final object to realize a simplification for the designing method of the ac-ac switch mode conversion circuits.

To realize the proposed objectives is necessary to treat like a first point, through a quantitative research, the PWM and APWM command methods. The study will continue with the solution of the equation systems that characterize the ac-ac switch mode converters circuits function, which for there are very difficult solution on mathematical way.

There are defined the next circuit quantities:

 $\alpha$ : the turn on angle of the K<sub>1</sub> switch;

 $\beta$ : the turn on angle of the K<sub>2</sub> switch;

<sup>1</sup>L $\alpha\beta$ : the inductor current during  $\alpha\beta$  period;

 $I_{\alpha}$ :  $i_{L\alpha\beta}$  initial value;

 $u_{c\alpha\beta}$ : the capacitor voltage during  $\alpha\beta$  period;

 $U_{\alpha}$ :  $u_{c\alpha\beta}$  initial value;

 $i_{L\beta\alpha}$  : the inductor current during  $\beta\alpha$  period;

I<sub>B</sub>:  $i_{LB\alpha}$  initial value;

 $u_{c\beta\alpha}$ : the capacitor voltage during  $\beta\alpha$  period;

 $U_{\beta}$ :  $u_{c\beta\alpha}$  initial value;

- φ: phase angle
- $\gamma$ : duty factor

The determination of quantities expressions is the first step of the power transfer calculus. The next step is to study the circuit transient and steady state, step that completes the first objective solution. The research in this stage becomes the one quantitative; there are obtained the based quantities expressions. With these expressions will store data for a database that is necessary for the next sequences of the project algorithm. The research becomes quantitative too because it is realized for the each type of command, respectively for each type of ac-ac converter structure.

An example of calculus is made for the buck converter with PWM command.

Fig.1. AC-AC Buck converter.

a) K<sub>1</sub> is turn off, K<sub>2</sub> is turn on,  $\omega t \in [\alpha, \beta]$   $\begin{cases}
L \frac{di_L}{dt} + ri_L(t) + u_c(t) = u(t) \\
C \frac{du_C}{dt} = i_C(t) \\
\frac{u_C(t)}{R} = i_R(t) \\
i_C(t) + i_R(t) = i_L(t)
\end{cases}$ (1) The initial conditions are:  $\begin{cases}
i_L(\omega t = \alpha) = I_\alpha
\end{cases}$ 

$$\begin{aligned}
u_{\rm C}(\omega t = \alpha) &= U_{\rm C\alpha}
\end{aligned}$$
(2)

The system is solved by Laplace method. In case of sinusoidal input voltage using Laplace transformation the system becomes:

$$\begin{cases} sLI_{L}(s) - LI_{\alpha} + rI_{L}(s) + U_{C}(s) = U(s) \\ sCU_{C}(s) - CU_{C\alpha} = I_{C}(s) \\ RI_{R}(s) = U_{C}(s) \\ I_{C}(s) + I_{R}(s) = I_{L}(s) \end{cases}$$

$$U(s) = U_{m} \frac{s \cdot \sin \alpha + \omega \cdot \cos \alpha}{s^{2} + \omega^{2}}$$

$$b) K_{1} \text{ is turn on, } K_{2} \text{ is turn off, } \omega t \in [\beta, \alpha]$$

$$\begin{cases} L \frac{di_{L}}{dt} + ri_{L} + u_{c} = 0 \\ C \frac{du_{C}}{dt} = i_{C} \\ i_{C} + i_{R} = i_{L} \end{cases}$$

$$(4)$$

The initial conditions are:

$$\begin{cases} i_{L}(\omega t = \beta) = I_{\beta} \\ u_{C}(\omega t = \beta) = U_{C\beta} \end{cases}$$
(5)

The figure 2 waveforms and the matrix with minimum and maximum values of the currents  $I_{\alpha}$  and  $I_{\beta}$  are obtained by MathCAD functions after the systems (1) and (4) solving. During the  $K_1$  turn on period and  $K_2$  turn off period the quantities have the next expressions: - the  $i_{L\alpha\beta}$  current

$$iL\alpha\beta(t, r, L, C, \phi, \alpha, I\alpha, U\alpha, S) := Re \left[ \sum_{k=0}^{last(S)} \frac{\Delta IL\alpha\beta(r, L, C, \phi, \alpha, I\alpha, U\alpha, S_k)}{\Delta I\alpha\beta(r, L, C, \phi, S_k)} \cdot e^{S_k \cdot \left(t - \frac{\alpha}{\omega}\right)} \right]$$

- the  $i_{R\alpha\beta}$  current

$$i R \alpha \beta(t, r, L, C, \phi, \alpha, I \alpha, U \alpha, S) := Re \left[ \begin{array}{c} last(S) \\ \sum_{k=0}^{last(S)} \frac{\Delta I R \alpha \beta(r, L, C, \phi, \alpha, I \alpha, U \alpha, S_k)}{\Delta I \alpha \beta(r, L, C, \phi, S_k)} \cdot e^{S_k \cdot \left(t - \frac{\alpha}{\omega}\right)} \right]$$

- the  $i_{C\alpha\beta}$  current

$$iC\alpha\beta(t, r, L, C, \phi, \alpha, I\alpha, U\alpha, S) := \operatorname{Re} \left[ \begin{array}{c} \operatorname{last}(S) \\ \sum_{k=0}^{\operatorname{last}(S)} \frac{\Delta IC\alpha\beta(r, L, C, \phi, \alpha, I\alpha, U\alpha, S_k)}{\Delta I\alpha\beta(r, L, C, \phi, S_k)} \cdot e^{S_k \cdot \left(t - \frac{\alpha}{\omega}\right)} \right]$$

- the  $u_{C\alpha\beta}$  voltage

$$uC\alpha\beta(t, r, L, C, \phi, \alpha, I\alpha, U\alpha, S) := \operatorname{Re} \left[ \sum_{k=0}^{\operatorname{last}(S)} \frac{\Delta UC\alpha\beta(r, L, C, \phi, \alpha, I\alpha, U\alpha, S_k)}{\Delta I\alpha\beta(r, L, C, \phi, S_k)} \cdot e^{S_k \cdot \left(t - \frac{\alpha}{\omega}\right)} \right]$$

During the  $K_2$  turn on period and  $K_1$  turn off period the quantities have the next expressions: - the  $i_{L\beta\alpha}$  current

$$iL\beta o(t, r, L, C, \phi, \beta, I\beta, U\beta, S) := \operatorname{Re} \left[ \sum_{k=0}^{\operatorname{last}(S)} \frac{\Delta IL\beta \alpha \left(r, L, C, \phi, \beta, I\beta, U\beta, S_{k}\right)}{\Delta I\beta \alpha \left(r, L, C, \phi, S_{k}\right)} \cdot e^{S_{k} \cdot \left(t - \frac{\beta}{\omega}\right)} \right]$$

- the  $i_{R\beta\alpha}$  current

$$iR\beta\sigma(\mathbf{t},\mathbf{r},\mathbf{L},\mathbf{C},\boldsymbol{\phi},\boldsymbol{\beta},\mathbf{I}\boldsymbol{\beta},\mathbf{U}\boldsymbol{\beta},\mathbf{S}) := \operatorname{Re}\left[\sum_{\mathbf{k}=0}^{\operatorname{last}(\mathbf{S})} \frac{\Delta IR\beta\alpha(\mathbf{r},\mathbf{L},\mathbf{C},\boldsymbol{\phi},\boldsymbol{\beta},\mathbf{I}\boldsymbol{\beta},\mathbf{U}\boldsymbol{\beta},\mathbf{S}_{\mathbf{k}})}{\Delta I\beta\alpha(\mathbf{r},\mathbf{L},\mathbf{C},\boldsymbol{\phi},\mathbf{S}_{\mathbf{k}})} \cdot e^{\mathbf{S}_{\mathbf{k}}\cdot\left(\mathbf{t}-\frac{\boldsymbol{\beta}}{\omega}\right)}\right]$$

- the  $i_{C\beta\alpha}$  current

$$iC\beta o(t, r, L, C, \phi, \beta, I\beta, U\beta, S) := Re \left[ \begin{array}{c} last(S) \\ \sum_{k=0} \frac{\Delta IC\beta \alpha \left(r, L, C, \phi, \beta, I\beta, U\beta, S_{k}\right)}{\Delta I\beta \alpha \left(r, L, C, \phi, S_{k}\right)} \cdot e^{S_{k} \cdot \left(t - \frac{\beta}{\omega}\right)} \right]$$

- the  $u_{C\beta\alpha}$  voltage

$$uC\beta o(t, r, L, C, \phi, \beta, I\beta, U\beta, S) := Re \left[ \begin{array}{c} last(S) \\ \sum_{k=0} \frac{\Delta UC\beta \alpha \left(r, L, C, \phi, \beta, I\beta, U\beta, S_{k}\right)}{\Delta l\beta \alpha \left(r, L, C, \phi, S_{k}\right)} \cdot e^{S_{k} \cdot \left(t - \frac{\beta}{\omega}\right)} \right] \right]$$

The figure 2 waveforms are realized for steady state with the next condition:

The database is obtained with the help of relations from (1) to (6) and contains: the duty factors; the load angles; the volt amp power on resistor; the active power on resistor; the deforming power on resistor; the volt amp power on capacitor; the active power on capacitor; the reactive power on capacitor; the reactive power on capacitor; the reactive power on inductor; the active power on inductor; the active power on inductor; the deforming power on inductor.

This database is completed with the waveforms, which are collected with the help of an oscilloscope with memory. These forms represent different quantities of converter circuit.

The next step of the algorithm, the one that resolve the point 3 and 4 of the proposed study, are a qualitative research. This means that it verifies the calculus precision from the earlier steps. Determination of the approximation method of power transfer to load becomes the essential element necessary to realize the virtual model. Now there is necessary to verify the energetic balance with the obtained values from the earlier steps. It must specify that the verification stage can be covered thanks to existence of the experimental montage that is realized by a part of research team before the proposing of this study.

The first objective, the elaboration of the mathematical model for expression of the circuit operation, for each scheme of ac-ac converters, will be realized by the all members of the research team. This objective is formed by the accumulation stage of the knowledges and values. With their experience in energetic conversion area, the director of project, Miron Mihai, Constantinescu Cristian and Pana Gheorghe will realize the stage of interpretation and development of solution for circuits modeling.

The virtual model realization, the area innovation element will be made with the database which is obtained in anterior stages and which is verified in the experimental research stage. The director of project, Miron Mihai, Constantinescu Cristian and Pana Gheorghe will execute the objective because they have experience in PSpice simulation area too.

Gherman Laurian, Ursoiu Carmen and the other members of team will involve finding an optimal solution for the turn on / turn off control of switching elements from ac-ac converters. This means to realize a procedure to automatic regulation of the ac-ac converter output power depending by the load and duty factor. This continues with the development of the soft that will resolve the optimal control of switching elements to obtain high energetic parameters. In order of development the next soft will use:

- MathCAD, MathLAB necessary for the values calculus and determination of the expressions of circuit characteristic quantities
- SP107E in experimental research stage, for the visualization of the waveforms.
- PSpice (ORCAD), LabVIEW in function simulation and ac-ac swintching converter modeling.

The characterization of the proposed theme as a fundamental research, becomes evidently because of existing feedback through the objectives solvent. The research starts with the study of the processes and phenomena which be held at ac-ac switching mode converters function, continues with the development of a new conceptual model for the ac-ac switching mode converters and finishes with the realization of the automatic and assisted regulation system for the ac-ac switching mode converters. All of these are made to obtain high energetic parameters.

It is clear that the proposed research subject can't exist without a part of experimental research necessary to verify the theoretical results and the proposed solutions. The experimental research consists in development of the existing montage and development of new montage.

# Improving the efficiency of IT system in Supply Directorate in order to carry out the future demands of Supply Directorate

## LTC Mohd'A. ALOMOUSH

### **Business case**

The IT System in Supply Directorate the operating system, the database, the equipment and the network are outdated. As a result of this, an upgrading of the IT system is necessary. The following reasons underline this necessity:

### 1.Equipment.

Since the equipment is too old (e.g. Server is Avion Data General, Dummy Terminals (Sedco, D217)) it is very difficult to find spare parts either on the local market or outside country. Therefore, these spare parts are assumed to be exported from abroad (USA). However, the supply of such parts outside Jordan is quite rare. Hence the prices are high (Dummy Terminal about 800\$, CPU about 2000\$) and the time needed for purchasing and obtaining them is too long (at least two months). As a result, the costs incurred by spare parts acquisition are too high compared to the benefits. In an optimistic prediction these equipment will not be functioned more than one year.

### 2.The Database.

It is an old version (oracle 7.3) as compared to the database that already used in IT Directorate (oracle 10g). The compatibility of the databases will facilitate and improve the maintenance of these databases. As a result of compatibility we can train one team to do maintenance for all databases.

Consequently, no domestic company provides technical support and the Original company is located outside the country also will not provides technical support because this (database oracle 7) is out of date; so if serious a problem happened (control file corrupted, data file damaged) which means that our data is in a critical situation because the original company will not responsible to find any solution.

### 3.Operating System.

It is an old version (Sco Unix) and there is no technical support from any domestic company and the Original company which is outside the country because this operating system is out of date so the original company which produced this type is not responsible to find ay solution for you if a critical problem happened (one of booting files damaged). This means that our system is critical situation because of the relation with database (one system file damaged in working day so we cannot see our data until we solve this problem)

#### 4.Programs.

It is an old version (Developer 2000) that we have not any technical support from any local company and the Original company. This means that we will face a problem in fixing errors and modifying the application related to the customer demands.

### **5.Experts.**

Because the application programs and database are old version we have few persons (four persons; two of them will get retired within two years) who still close to these application because no one at this time wants to learn how to deal with this programs; because there are not available at the schedule of training companies and also no one wants to learn old software. Thus, not only is the number of experts a small one, but costs of hiring consultants are high (200\$/h).

### **Recommendation**

We should be a ware to the problem that we will face in accordance to the expectation of the IT system in Supply Directorate because of the old of database, applications, operating system, equipments and a rare of experts so we are obliged to upgrade the database, developments tool(developer 10g),conversion data, and application, and changing the equipments. So the suggested procedure to fix this problem will be through upgrading the Database from version 7 to version 10g and application from developer 2000 to developer 10g. Replaced the OS from Sco Unix To Redhat Linux. The upgrading for software related to Database and application, installing Os and modifying the network will be done by IT Directorate. Purchasing the equipment will be from the budget of Supply Directorate and the amount of money that we will need is approximately (32700\$).

### 4. <u>Project scope management</u>

### 4.1. Project goal

**The project** goal is to improve the efficiency of IT system in Supply Directorate in order to carry out the future demands of Supply Directorate.

### **4.2. Project objectives**

For the goal defined above, we identified the following objectives:

1. Installing operating system, (Redhat linux), Upgrading database from oracle 7 to oracle 10 g and the application from oracle developer 2000 to developer 10g to improve the efficiency of the IT System in Supply Directorate.

2. Converting the application from oracle developer 2000 to developer 10g to improve the efficiency of the IT System in Supply Directorate.

3. Purchasing the equipment for the IT SYSTEM in Supply Directorate.

4. Modifying the network in Supply Directorate to absorb the new system.

5. Purchasing, licenses (Oracle database, developer 10 and Redhat linux ) for Supply Directorate to establish the new IT system.

O1. Installing operating system, (Redhat linux), Upgrading database from oracle 7 to oracle 10 g and the application from oracle developer 2000 to developer 10g to improve the efficiency of the IT System in Supply Directorate.

- 1.1.Training workshop to show the installing of operating system (Redhat linux),oracle database 10g and developer 10g to the database administrators in IT directorate.
- **1.2.** Installing process of operating system (Redhat linux), oracle database (10 g) and developer10g on servers in Supply Directorate.

O2. Converting the application from oracle developer 2000 to developer 10g to improve the efficiency of the IT System in Supply Directorate.

2.1 Training workshop to explain the procedure of the conversion process for the applications from developer 2000 to developer 10g.
2.2 Group times from the procedure of the procedure of the process for the applications from the process for the procedure of the procedure of the procedure of the process for the procedure of the process for the procedure of the

2.2 Converting process for applications from developer 200 to developer 10g in Supply Directorate.

2.3 Converting process for Data from 7 bit to 8 bit in Supply Directorate.

2.3. Testing process for IT System in Supply Directorate.

**O3.** Purchasing the equipment for the IT SYSTEM in Supply Directorate.

3.1 Sending requests by Procurement Directorate to the companies of the equipments list that will used to accomplish the IT System in the supply Directorate (Server,workstations, printers, switches, cables,....) in order to send there offers..

**3.2 Receiving companies offers by Procurement Directorate to the equipment of Supply Directorate.** 

**3.3Anylizing offers by Procurement Directorate and send approval to the company that has the best offer.** 

**3.3 Receiving equipment by Procurement Directorate from the company** that her offer is accepted to provide the equipment to Supply Directorate.

### 04. Modifying the network in Supply Directorate to absorb the new system.

4.1 Modifying network infra structure to be ready to establish a network for the new system in Supply Directorate.

4.2 Installing equipment in Supply Directorate.

O5 Purchasing, licenses (Oracle database, developer 10 and redhat linux) for Supply Directorate to establish the new IT system.

5.1 Sending requests by IT Directorate to the companies in order to buy licensees to implemented in Supply Directorate.

**5.2** Receiving companies offers by IT Directorate for the licensees to be implemented in Supply Directorate.

**5.3Anylizing offers by IT Directorate and send approval to the company that has the best offer.** 

**5.3** Receiving licenses by IT Directorate from the company that her offer is accepted to be installed in Supply Directorate.

### 5. Project Time Management

The start date and the end date of each activity and sub-activity are presented in the Gantt chart annexed to the hereby project.

### 6. <u>Human Resources Management</u>

The human resources necessary during each phase of the project, as well as the corresponding costs are presented in the Microsoft Project sheet annexed to the hereby paper.

Next, the costs are presented in connection to each to recourse. As it becomes obvious from the first to fourth no costs are allocated because the resources are already in place within the Jordan Armed Forces (The human resource as well as the services including Transportation, Food, Drinks).

| Seq.No | Resource  | Name                            | cost   | Source         |
|--------|-----------|---------------------------------|--------|----------------|
| 1      | Human     | DBA team leader (1)             | zero   | Jordan Armed   |
|        |           | Development team                |        | forces         |
|        |           | leader(1)                       |        |                |
|        |           | <b>Technical team leader(1)</b> |        |                |
|        |           | Development team(3)             |        |                |
|        |           | DBA team (2)                    |        |                |
|        |           | <b>Technical team (3)</b>       |        |                |
| 2      | Equipment | Server(1)                       | zero   | IT Directorate |
|        |           | Workstation(5)                  |        |                |
|        |           | Printer(1)                      |        |                |
|        |           | Switch(1)                       |        |                |
| 3      | Services  | Transportation                  |        | Jordan Army    |
|        |           | Food                            | zero   |                |
|        |           | Drinks                          |        |                |
| 4      | Material  | Stationary                      | zero   |                |
| 5      | Services  | DBA training                    | 1200\$ | Project Budget |
| 6      | Services  | Programmers Training            | 1500\$ | Project Budget |

## 8. Project Quality Management

Next, the deliverables and quality indicators are presented in connection to each activity:

### **Deliverables**

| Туре      | Name           | Activity Code         | Quality               | Responsibility |
|-----------|----------------|-----------------------|-----------------------|----------------|
| • •       |                | · ·                   | Measurements          |                |
|           | Servers,       | 6, 6.1, 6.2,          | Equipments            | Procurement    |
| Equipment | workstations,  | 7, 7.1, 7.2,          | subject to            | Directorate    |
|           | switches,      | 8, 8.1, 8.2           | JORDAN                |                |
|           | cables, UBS    |                       | ARMED                 |                |
|           |                |                       | FORCES                |                |
|           |                |                       | standard              |                |
| Software  | Licenses of    | 12, 12.1, 12.2, 12.3, | Oracle                | IT             |
|           | Database 10g,  | 12.4, 12.5            | Licenses(database     | Directorate    |
|           | Developer 10g, |                       | 10g,devloper2000)     |                |
|           | Operating      |                       | <b>Redhat License</b> |                |
|           | system (Redhat |                       |                       |                |
|           | Linux)         |                       |                       |                |
|           | Programs       |                       | IT directorate        | IT             |
|           |                |                       | Standard              | Directorate    |
| Documents | End user       | 13, 13.1, 13.2,       | IT directorate        | IT             |
|           | Guide          | 13.2.1, 13.2.2,       | Standard              | Directorate    |

Table 1. Project deliverables and quality indicators

## 9. <u>Risk Management Plan</u>

For the smooth running of the project, we have identified some of the risks that may hamper the activities to various degrees:

| Risk name        | Risk description      | Risk level | Risk approach            |
|------------------|-----------------------|------------|--------------------------|
| Supply equipment | -equipment which      | low        | Change the equipments    |
|                  | was received violated |            | and the company should   |
|                  | the standard of       |            | pay penalties because of |

| Risk name               | Risk description      | Risk level | Risk approach                   |
|-------------------------|-----------------------|------------|---------------------------------|
|                         | Jordan Army           |            | delay.                          |
|                         | -delivery delayed due |            | Change the company and          |
|                         | to problems of        |            | the first company should        |
|                         | transport of out side |            | pay penalties.                  |
|                         |                       |            | Pay penalties because of delay. |
| The Lake of programmers | Specific errors       | Low        | Hire an expert for              |
| experience in such a    | appeared during       |            | specific hours.                 |
| project.                | conversion process    |            |                                 |

Table 2. Project risks – name, description, level, approach

## 10. <u>Communication plan matrix</u>

For the purpose of successful project implementation, various communication lines and methods have been suggested, as the following table shows:

| Target<br>audience | Persons to<br>convey the | When the message<br>is conveyed | Format the   | Message content  | Delivered by     |
|--------------------|--------------------------|---------------------------------|--------------|--|------------------|
| uuuienee           | message                  | is conveyed                     | message      |  |                  |
| IT                 | Chief of IT              | Pre initiating the              | Report       | 1. The necessity of developing the it system in supply   | Project manager  |
| Directorate        | Directorate              | project before one              |              | directorate.   |                  |
|                    |                          | month from starting             |              | 2. The resources for the project.                        |                  |
|                    |                          | the project.                    |              | 3. The cost of the project.                              |                  |
|                    |                          |                                 |              | 4. The duration time to finish the project.              |                  |
|                    |                          |                                 |              | 5. The plan to perform the project                       |                  |
|                    |                          |                                 | Report after |  |                  |
|                    |                          |                                 | the meeting  |  |                  |
|                    |                          |                                 | with project |  |                  |
|                    |                          | Initiating phase                | team leaders | Related to the meeting with team leaders of the project. | Project manager  |
|                    |                          |                                 |              |  |                  |
|                    |                          | Planning phase                  | On the third | Plan stans to perform the project                        |                  |
|                    |                          | r faining phase                 | week of the  | Than steps to perform the project                        | Project manager  |
|                    |                          |                                 | project      |  | I Toject manager |

# **Ware House-Automation Equipment**

# Lt. Florin SPÂRLU

### 1. Business Case for Ware House-Automation Equipment

#### **1.1. Executive Summary**

Analysis of the ABC Company's needs to decrease the cost of production issued this project as a result of ABC Company demands.

The solution for the demand of the ABC Company we recommend purchasing FLORAL software, an office-automation product that will save E 103,468 costs over one year for ABC Company.

A production of bricks direct proportional with the demands of the sales points and the purchasing of the right amount of prime materials for the production will eliminate the cost of the four additional ware houses.

By the beginning of July 2011 the office automation product will run on ABC Company and also in all of the ABC Company sales points.

### FLORAL kit will cost 15,362 €; paid once

- it will be design in accordance with the requirements:
- it will implement ware house -automation equipment on the factory unit and also on the sales points.
- the package includes also the personnel training.

The return on investment (ROI) over one year is 112%. The payback period is 1.6 month.

#### **1.2. Business Opportunity**

ABC Company has an opportunity to save 8622 E/monthly, annually 103,468 E.(according to appendix 5.a.-)

This opportunity allows ABC Company to grow efficiently by:

- lowering the cost of materials

- lowering the cost of administration

### a. Benefits

IT EASY will provide all the capabilities and benefits of ABC Company's current ware house -automation update of the needs of sales points and the needs of ABC Company's prime materials.

IT EASY will solve two sensitive problems that requires on increasing the price of materials.

- The cost of depositing the materials
- The labor to centralized the needs

Administrative assistants at ABC Company spend on average two hours/day, updating the currents needs, distributing and keeping day count of the materials remain in the factory. By automatically updating the currents needs, distributing and keeping day count of the materials ABC Company's save an estimated 480 hours per year in labor costs.

### Elimination of Errors

ABC Company's current office-automation up date will prevent users from accidentally making mistakes on counting the quantity of the materials need, the needs to be sold and the amount of the materials remained in the factory.

Administrative assistants spend 0, 5 hours daily per correcting each problem.

By eliminating these errors, ABC Company's will save an estimated 120 hours per year in labor costs.

### 1.3. Costs

IT EASY purchase price: 15,362 €

Estimated life cycle: ten years.

Installation fee: included in the purchase price.

Annual maintenance contract: 540 €

### **1.4. Financial Analysis**

|                     | Actually costs |                |                |        |  |  |  |  |

Return on investment (ROI): 144% Payback period: **1.6 month** 

## 2. Scope statement

### 2.1. Goal

By the end of June 2011 FLORAL software will be fully operational on ABC Company and also in all of the ABC Company sales points.

### 2.2. Projects objectives

1. IT EASY will deliver the FLORAL software no later than 25<sup>th</sup> May 2011 according to the specific requirements.

2. Implementation of office automation product on ABC Company and also in all of the ABC Company sales points will be done no later than 3<sup>rd</sup> of June 2011.

3. No later than 4<sup>th</sup> July 2011, 22 employees of ABC Company will operate with FLORAL software in according to the specifications of the product.

### 2.3. Projects deliverables

- 1. Soft package computing costumer accounts
- 2. Soft package updating the data base automatically
- 3. Soft package computing ABC Company's needs of bricks for each sales point
- 4. Soft package computing ABC Company's needs of prime materials for production

### 2.4. Projects requirements

- 1. a. bills and pro forma invoice should be A4 in sheet;
- 1. b. bills and pro forma invoice should have ABC Company's badge;

1. c date accurate

2. a. data base should contain real time information requiring quantity of sale, time, date, and numbers of transactions

2. b. the up date of the data base should be made via internet

2. c. the reports of data base should right access be seen only by the administrator of the ABC Company

3. a. program should report quantity, types of the bricks remained on every sales point and in the ABC Company ware house in every moment

4. a. program should report day to day need of quantity of prime materials for the factory production

### 2.5. Project Boundaries

1.IT EASY will develop, implement the package and also will train the employees in the same budget.

2. IT EASY will demand extra pay for annual maintenance.

3. IT EASY will demand extra pay for future training

### 2.6. Product Acceptance Criteria

1. After the final phased the implemented system will offer the completed reports on time.

2. Production, sales, and purchasing on ABC Companies will be able to be made based on the specific report on the right time.

### **2.7. Project Constraints**

1. All 22 employees that should be train should be available at the precise time.

2. Every delay on finishing the project caused by ABC Company should be paid by the ABC Company.

3. All the employees that will go to be trained by IT EASY will sign a confidentiality agreement

### 2.8. Project Assumptions

1. If some delays occur caused by the ABC Company, IT EASY will not response by the modifications of the price of the materials.

2. If the employees will not attend the courses IT EASY will receive the same amount of money.
## 2.9. Project organization

- The list of stakeholders is as the one describe in appendix 1.a.
- The organizational integration of the project management is clearly defined in the project.
- Clear functions, competence and responsibility were established.

## 2.10. Defined risks

## The project has the following potential risks:

- Project fit to customer organization;
- Project fit to provider organization;
- Customer perception;
- Work flow;
- Political influences;
- Convenient date;
- Use of attractive tehnology;
- Organization stability;
- Organization roles and responsibilities;
- Projects objectives;
- User involment;
- User experience;
- User acceptance;
- User training needs;
- User justification;
- Project size;
- Costs controls;
- Requirements stability;
- Testability;
- Design difficulty;
- Implementation dificulty;
- System dependencies;
- Alternatives analysis;
- Quality assurance aproach;
- Early Identification of defects;

- Defect tracking;
- Physical facilities;
- Tools availability;
- Disaster recovery
- Design complexity;
- Support personel;
- Vendor support .

## 2.11. Schedule milestones

- Tue 3/29/11 Product milestone
- Tue 4/5/11 Design milestone
- Thu 5/5/11 Final product milestone
- Tue 5/17/11 1<sup>st</sup> verification milestone
- Fri 6/3/11 2<sup>nd</sup> verification milestone
- Fri 6/3/11 3<sup>rd</sup> Verification milestone

## 2.12. Cost estimates

- The budget estimated for this project was made in according with the actual prices and was evaluated at the amount of 15362 euro.
- In this amount of money are included the equipment and also the training of the personnel.

### 2.13. Project specifications

The details of the package kit will be written in:

- the maintenance handbook
- functionality system book
- implementation SOP

## **3. Resources management**

Resource pool description is described in the 4<sup>th</sup> Appendix;

WBS is describing in Grant Chart (3<sup>rd</sup> Appendix).

## 4. Time management plan

Gantt chart included in the Appendix 2<sup>nd</sup> Appendix.

### 5. Cost management plan

a. The package kit of the project was established in accordance with the numbers of the personnel that need to be trained and the numbers of sales point.

b. The changes that will occur in the ABC Company will increase or decrease the price of the package in accordance with the number of personnel and the numbers of sales point.

The change will be allowed to be in a range of maximum of 15 %.

If the decrease will be more than 15 % during the project the cost for the package kit will be at the level of less 15%.

If the increase will be more than 15% during the project the package kit will be only for the limit of 15%.

## Risk management plan

| No.      | Risk name                               | Risk description  | Risk level       | Risk approach   |
|----------|---|---|------------------|---|
|          | Project fit to customer                 | Mission Does not support or relate to customer  | and Goals        |   |
| 1        | organization                            | goal  | Low              | At each miles stone implicate ABC consult leader team   |
| 2        | Project fit to provider<br>organization | Does not support or relate to provider<br>goal  | High             | Try to find alternative for the providers   |
| 3        | Customer perception                     | Customer expects this organization to<br>provide the bricks on time   | Medium           | List of customer needs will be done earlier enough to<br>provide the precise quantity and quality on time   |
| 4        | Work flow                               | Significantly changes   | High             | For the beginig phase of production ABC consult team will<br>evaluate twicelly on week the work flow to be in accordance<br>with the issued SOP   |
|          |   | Decisio   | on Drivers       |   |
| 5        | Political influences                    | No particular politically-driven<br>choices being made  | Low              | No political aspects will be develop  |
| 6        | Convenient date                         | Date is being partially driven by need<br>to purchaising the equipment on time<br>and to develop for emplyees a high<br>level of handle the software system | Low              | Purchasing date for the equipment was made on the beginig<br>of the project; The employees will have practice clases  |
| 7        | Use of attractive tehnology             | Reject to the new tehnology that is bring into the organization   | Medium           | Explain clases of the need of the system will be perform  |
|          |   | Organizatio   | n management     |   |
| 8        | Organization stability                  | Little or no change in the management structure   | Low              | Rotate the members of organization on the function  |
| 9        | Organization roles and responsibilities | Individuals throughtout the<br>organization understand their own<br>roles and responsibilities and those of<br>others                                       | Low              | Monthly discussons with the members of organizations  |
| 10       | Projects objectives                     | Verifiable project, objectives,<br>reasonable requirements  | Low              | Rewiev scope statement  |
|          |   | Ū   | sers             |   |
| 11       | User involment                          | Not involved in the trainig process   | Medium           | Use of intereactive presentations and offer soft drinks during<br>the breaks  |
| 12       | User experience                         | Users have no previous experience with similar projects   | High             | Lack of experience will by bypas by practice  |
| 13       | User acceptance                         | Users accept most of concepts and details of system;  | Medium           |   |
| 13       | User training needs                     | User training needs consider  | Low              |   |
| 14       | User justification                      | User justification complet  | Low              | mandatory to gratuaded  |
|          |   | Medium, moderate complexity.  | lar acter istics |   |
| 15       | Project size                            | decomposable  | Medium           |   |
| 16       | Costs controls                          | well established  | Low              |   |
|          |   | Some change expected against  | ct content       |   |
| 17       | Requirements stability                  | approved set  | Medium           | At each miles stone implicate ABC consult leader team   |
| 18       | Testability                             | Parts of product to test  | Medium           | analyzed  |
| 20       | Implementation dificulty                | Content is reasonable for the teams   | Low              |   |
| 21       | System dependencies                     | clear defined dependencies  | Low              |   |
|          |   | Developn  | ient process     |   |
| 22       | Alternatives analysis                   | Analysis of alternatives  | Low              | Alternative analysis perform in the define the product  |
| 23       | Quality assurance aproach               | folled  | Medium           | Implement SOP   |
| 24       | Early Identification of defects         | ream expects to find all defects with testing   | High             | Record all the incidents that appeared  |
| 25       | Defect tracking                         | Defect tracking process in place  | Medium           | Establish Qualification Test  |
|          |   | Developmer  | it environment   | list of comon facilities will be establish from the election  |
| 26       | Physical facilities                     | Comon facilities  | Medium           | phase   |
| 27       | Tools availability                      | Lack of electrical devices  | Low              | rewiev at the beginig of the project the nedeed devices   |
| 28       | Disaster recovery                       | Data security, back up of system  | High             | All people involved in the project will sign an confidentional<br>paper; A back up will be perform after each phase and a<br>general back will be made after the project will be finish |
|          |   | Maintenano  | ce and support   |   |

# WHAT MAKES AN EFFECTIVE PROJECT MANAGER?

# An extensive study on the importance of human resource management principles in securing project management success

# Lecturer PhD Ecaterina Livia TĂTAR

## Introduction

When approaching various fields and branches of management, one may notice that the science and art of management never ceases to display overlapping dimensions, thus emphasizing its interdisciplinary nature. In fact, we can speak about a somewhat antagonistic tendency: on the one hand, hype-specialization in a particular area of management theory and practice is regarded as a means to achieve better knowledge and understanding of the processes. On the other hand, the ever growing complexity of management processes calls for an interdisciplinary approach, for it is difficult to draw clear-cut boundaries in what may be, and usually is, a complex endeavor, entailing a wide range of skills and/or experiences. Moreover, such an approach could be considered to be an oversimplification that disregards the breadth and depth of managerial roles and areas of responsibility.

Consequently, the hereby study attempts to examine the complex nature of project management, with an emphasis on the project manager's duties. Also, attention will be paid to the soft skills he/she must display in order to increase the project's success rate, as I consider that non-measurable or unquantifiable skills governing a manager's activity can really make the difference between failure and success.

At the same time, the present study will present the human resource management principles that pertain to the project manager's specific attributes, in order to examine the extent to which they can and must contribute to facilitating project progress, while valuing what I consider to be a modern organization's most valuable asset: its people.

# **CHAPTER I**

## **Overview of human resource management principles**

The following section of the study attempts to critically analyze some of the human resource management roles and responsibilities as they are reflected in the specialized literature. However, by no means do I intend to transform this chapter into a manual of human resource management, but rather capture the main attributes and duties that a human resource manager should display in his/her daily activity.

In the light of the above, I would like to start by mentioning an article which, in my opinion, succeeds in presenting useful snapshots of the core of human resource management. Thus, in her article entitled "*The Supervisor and Human Resource Management*", Lesley Myland (1995) adopts an objective view of what duties a manager should or should not do in order to effectively perform their tasks, regardless of the hierarchical level or position they occupy.

Mention should be made that the analysis is put into perspective by mentioning several management trends that delineate modern organizations' environment, such as: delayering, restructuring, or downsizing, all of which resulting in flatter, more agile organizations, where accountability or information flow are more flexible compared to traditional, pyramidal, and often bureaucratic organizations. Needless to say that these trends impact significantly the organization's internal processes such as decision-making or problem-solving concerning of the way, methods, and procedures used to perform them. More precisely, these activities continue to be done in the same quantitative terms, but their qualitative coordinates change significantly both in terms of efficiency, and in terms of effectiveness.

Going back to the article findings, one can notice the two-fold perspective presented by the author: the former argues that any manager or supervisor does human resources management, one way or another, more or less explicitly, regardless of what his/her job description mentions; the latter, on the other hand, suggests that human resources management duties should be let to professionals, for mid-level managers are already overburdened with more technical or tangible tasks, and consequently have neither the knowledge, nor the time and energy to perform these additional roles.

Obviously, the natural tendency of the one reading this article is to take either one of the two sides, weigh the pros and cons of each argument, and eventually decide whether they support the former or the latter. However, from the experience I have had with our course participants in the human resources management classes, I have noticed that the truth is somewhere in between, since most of the individuals expressing their opinions based on their personal experience have pointed out that they carry out at least *some* human resources management duties, to various extents, despite that their job descriptions do not stipulate anything specific in this respect.

At this early stage of my study, I would like to mention what exactly we mean by human resources management functions in the very context of this paper. Therefore, the following list is advanced, without pretending that this exhausts the whole range of roles, duties, and tasks. Instead, I will focus on those which I regard as most impactful, which leaves room for a significant degree of subjectivity and interpretation. Nonetheless, when selecting the items above, I will attempt to increase the objectivity of my choices by relying on my previous lectures, as well as on the valuable input provided by my previous students, both in formal and informal environments.

Resuming the human resources management roles, I suggest that we should focus on aspects such as: personnel recruitment, job assignment, staff appraisal, payment and reward schemes, grievance and disciplinary procedures – in no particular order. It is not the purpose of our endeavor to prioritize these aspects, since I strongly believe that one cannot do this for the simple reason that every single factor has its own critical importance upon the overall effectiveness of human resources management system applied in an organization. At one stage or another in developing and implementing personnel policies and strategies, each function is essential, and is subject to affect and being affected by the rest of the functions in a domino effect.

In the following sections of our study, I will briefly concentrate upon every function in order to ensure that their understanding is coherent and consistent across the paper.

## **Personnel recruitment**

In my opinion, this is the step that can guarantee the organization's future success provided that the recruitment policies fall in line with the organization's business strategy. This is why theorists and practitioners as well speak about strategic human resources management (SHRM), in an effort to emphasize that managers at all levels, but particularly the ones occupying top positions, should be aware of the strategic intent of their entity, understand it, and be able to see the picture of the business environment. One of the most widely used tools to assess the organization's current state is the popular SWAT analysis, which focuses upon the internal business environment when examining its strengths and weaknesses, and then upon the external environment when exploring its opportunities and threats. It goes without saying that the SWAT analysis is but one of the instruments utilized to evaluate what an organization has good and valuable versus what the organization needs to improve and/or be careful about. Management literature also mentions the PEST analysis, which refers to the political, economic, social, and technological factors impacting regional, national, or global environment at a certain moment in time.

Regardless of the tool used to assess an organization's condition, one should keep in mind the ultimate purpose of doing it, that is, to see where it is now (moment A), where we want it to be in the future (moment B), and how we can fill in the gap between moment A and moment B. It is the top decision-makers' duty to perform this type of analysis as accurately as possible, paying attention both to the breadth and to the depth of all the aspects involved. In doing so, I strongly argue that people matters must occupy the central stage, because they can make the difference between organization's success and failure.

In more concrete terms, the manager – no matter what his/her job description stipulates – should be the one who best knows the business strategic intent, its needs in terms of people, and how they can contribute to achieving organization's mission, goals, and objectives. The question is how exactly can the management at all levels ensure that the best people are attracted to the organization? And assuming that this has been accomplished, how can the organization retain them?

To address these complex issues, one must bear in mind several collateral implications. For instance, the simple use of the term "best" to describe people is extremely ambiguous, since every single job, as well as every single organizational culture requires a specific type of employee. To make thins even more complicated, "best" has not only a qualitative connotation, but also a qualitative connotation. In other words, when recruiting staff, the human resources manager must make sure that he/she provides the institution with the right *number* of people, and at the same time, these people have the right *skills* and *education, qualification, experience*, etc.

Once these initial stage is successfully completed and the personnel are ensured both in quantitative, and in qualitative terms, induction is carried out in order to make sure that the newly hired staff understand what is expected of them, and – what is more important – they match the organizational culture and the vice versa. Unless there is a clear and ambivalent relationship between the two parties – the employee and the organization – one should not and cannot expect a long-lasting and productive coexistence of the two.

Last but certainly not least, the retention phase is of paramount importance, since the organization cannot afford to lose a valuable employee: staring from the axiom that the recruitment process is a costly one – both time-wise, and money-wise – followed by the induction phase, which is at least equally costly in itself, let alone that it may often be accompanied by additional courses or training, which again mean time and money spent, it logically follows that retaining most valuable employees is not only advisable, but even decisive in achieving organizational success.

## Job assignment

One of the most difficult roles that a manager must perform is that of deciding who does what. The reason is multifaceted, for it involves displaying various and subtle skills, both measurable and unmeasurable, both tangible and intangible. Let us begin with the former ones, which may take the form of allocating a certain amount of work to a certain amount of people. Providing that the manager has a clear idea of what needs to be done, on the one hand, as well as what human resources are available to accomplish that particular amount of work, on the other hand, everything should be easy. And it is, in theory: the easy way is to do the simple math, and divide the work by the number of people, allocate the resulting tasks, set the standards and the deadline, and expect that everything will go smoothly. Naturally, the method described above is neither realistic, nor desirable. When it comes to people, nothing is simple, for one cannot find two identical individual concerning their skills, knowledge, experience, educational backgrounds, potential, learning abilities, culture, personality traits, expectations, motivation – and the list could go on, and on, and on...

Having said that, how can a manager make sure that the task distribution is done fairly? If one applies the simplistic math-based method, more often than not the result will be a disaster not only in productive terms, but also in people relation terms. The reason is that math simply does not apply to people, for a manager's duty – and gift, if I may add – is to know every employee's real potential to do a particular task. Since people are so different when it comes to all the things listed above, so is their capacity and ability to perform professionally. In a nutshell, this is the reason why math is not applicable to task allocation.

## Staff appraisal, payment and reward schemes

Notwithstanding that these roles have separate identities and impacts in the process of managing human resources management, I opted to approach them altogether, because I see them as a continuum of the same sequence, i.e., the activity of selecting the payment and reward scheme that best suits a particular individual and in accordance with his/her own individual performance.

Once again, the "hard" or measurable aspects of this managerial function are shadowed by the "soft" ones, which call for the deep and subtle knowledge and understanding of the human nature. It is often hard to decide on a particular employee's productivity or effectiveness at a certain moment in time, for a human is not a machine. A human is subject to mental or physical pitfalls, which affect labor performance. Also, various individuals are motivated by different perks, rewards, or incentives, depending on their personality, education, or culture. Some people react better or faster to positive reinforcement, whereas others react faster or better to negative reinforcement – this is the classical dilemma of "carrot and stick" motivation. Obviously, the carrot is always preferable, but reality shows that the stick is sometimes – regrettably – applied.

So how should a manager assess an employee's performance in order to ensure that he/she measures *what* needs to be measured and *how* it needs to be measured? How does he/she know that the appraisal moment is the one that truly reflects the employee's real level of performance? How does the manager know that he/she has applied the motivating methods that best match the employee's needs and expectation? Questions such as the previous ones make managers' life so complicated, sometimes even frustrating, but also challenging and rewarding at the same time.

# **Grievance and disciplinary procedures**

Once the matter of motivating and rewarding people has been approached, one may consider the problem half solved, at least in theory, because practically the complex and complicated nature of human beings leads to situations when people experience frustration, dissatisfaction, and even conflict. It is not the purpose of our study to deepen the theory and practice of conflict, which is one of magnitude and high importance to management theory and practice; nonetheless, I would like to point out that the concept of conflict pertains to a wide range of interpretations, depending on the "interpreter's" personal traits, education, background, culture, etc. Thus, we once again encounter the relative character of management models and theories, which hardly ever attempt, let alone succeed, in offering recipes for effective conflict solving. And this is a realistic attitude, from my point of view, due to the peculiarities of every conflict situation in terms of individuals and matters involved.

It, therefore, follows naturally that the manager's professional and personal characteristics will play a pivotal role in applying the appropriate grievance and disciplinary procedures, with an emphasis on the contingency approach which, in my opinion, should prevail managerial activities at all levels. Nevertheless, mention should be made that grievance and conflict occurrence are natural phenomena in every organization's life. Should we not encounter such manifestations, the organization's creativity, adaptability, and maturity should be questioned.

Once the inevitable and even desirable nature of conflict existence have been acknowledged, one should address the issue of conflict solving techniques and methods that are most appropriate at a particular moment in time, or most suitable to a particular group of professionals. This is due to the fact that conflict situations pertain to various approaches and solutions, according to the particularities of each context examined. Once again, insightfulness, flexibility, open-mindedness are but a few of the professional and interpersonal skills required of an individual filling in a management position, regardless of the hierarchical level one is discussing. To conclude the brief presentation of human resources management roles and attributes one needs to fulfill when exerting various management functions across the organization, one should notice that it is hard to draw a clear-cut line between the technical and interpersonal roles a manager must carry out on a daily basis. As a consequence of the truism that organizations, or more precisely, managers rely on individuals in order to perform all the tasks an organization's complex life requires, one may argue that every management function, however technical it may be, involves the use of interpersonal skills that can be subsumed to the larger field of human resources management.

Last but not least, I strongly argue that a manager is not complete unless he/she assumes human resources management roles, given that nowadays' employees are totally different from the employees fifty years ago. Thus, they are more educated, more skilled, and more competent, simply because they have more access to education, training, and information resources. Moreover, they are more exposed to diversity and diversification, which results in their expanding the range of competencies and, consequently, expectations. In simple words, this means that they expect their employers, i.e., their superiors or supervisors, to be aware of their needs and to support them in meeting these needs. In return, they make a significant contribution to their organization's overall success, which leads to a mutually beneficial relationship between the two parties – both the employer and the employee.

# **CHAPTER II**

## Fundamental dimensions of project management

In order to accomplish the purpose of our paper as we stated it at the very beginning of our endeavor, the following sections of the paper will focus on the characteristics of project management, with an emphasis on the project manager's roles, duties, and skills. Since we started the hereby study by advancing a parallelism between the principles of human resources management, in general, and the functions of an effective project manager, in particular, we will continue our analysis by delineating the main aspects that make a project manager effective and efficient at the same time. First, I would like to focus on the definition of a project as it is stated in management literature: "a project is a group of related tasks organized to achieve a goal [...] within defined specifications, has start and end dates, has funding limits, and consumes resources in terms of money, labor, equipment, and materials" (McCollum and Banacu, 2005, p. 30). As one may easily notice, by extrapolation, the goal of the project can be regarded as an organizational objective, whereas all the other elements delineating a project can be identified as any organization's resources and constraints.

Once the project goals and objectives have been established, the project manager is appointed, and the project commences. Theoretically at least, the project manager's roles are known from the very beginning. In practice, however, they can vary according to the nature of the project, as well as the quantity and quality of the resources available to accomplish that particular project. In the following paragraphs of the present study, we will concentrate upon the project manager's duties, and then the relationship between the project manager and the human resources he/she needs to manage in order to successfully complete the assigned project.

In general terms, one of the main duties which a project manager is expected to perform is to coordinate and integrate activities across numerous functional areas. In order to do this, he/she must display strong interpersonal and communicative skills, that is, leadership skills. We thus acknowledge that dealing with people is the first and most important challenge which the project manager should be able to face, for the complex nature of humans make this job difficult and sometimes confusing. In other words, he/she must act as a team leader, whose main role responsibility is to orient all team members towards the fulfillment of their individual role within the overall project. Formally, this is done on the grounds of a work breakdown structure document, which illustrates the various work packages that the project consists of. Mention should be made that this document is prone to changes, since the project beneficiary's requirements may change during the project unfolding. It thus becomes clear that the project manager needs to adopt a flexible mindset and, more importantly, be able to instill this flexibility to the team members, so that they are prepared for capable of dealing with potential changes.

To make things even more complicated, one should bear in mind that the team structure is not fixed throughout the project: some members will stay until the end of the project, some people will leave the team, whereas some other people will join the team. This requires tremendous leadership skills in order to harmonize the variety of people leaving and joining the team, while keeping the
team focused on their common goal: project completion within the initially stated time limit and budget and at the necessary standards.

Unfortunately, as Timmins (1995) states, "organizations invest little in improving relationship skills beyond basic communications training. But as the more highly developed countries of the world increase the service component of their economies, then relationship skills will become even more crucial [...]. Managing relationships with your colleagues is critical for success. Building good relationships and coalitions with your colleagues ensures you can rely on them for help when needed" (p. 23).

When using the term "colleague", one can assume the author refers to the wider range of co-workers, whether they are peers, superiors, or subordinates, due to the development that have taken place in the organizational environment nowadays: the organization is no longer a hierarchical, pyramidal rigid structure based on the rules of the chain of command, but rather an agile, creative, adaptable entity, in which this are done because people respond to their coworkers requests out of respect and mutual support. It is, therefore, of paramount importance to develop such communication and interpersonal skills, which represent a vital component of leadership skills, which, in their turn, are a fundamental dimension of human resources management.

The dark side of the coin is that formal training in the aforementioned skills is scarce and rather inefficient, for such competencies call for some traits that are often born and rarely made. However, there is still hope in this respect once we acknowledge that building relationships starts with treating people respectfully, regardless of their position inside, as well as outside the organization. Furthermore, as middle managers, project managers must translate the project goals into meaningful front-line tasks, "facilitate, take a lead on innovation and creativity, solve problems and communicate with all from top to toe of the organization" (Timmins, 1995, p. 23). Needless to say, all these roles are human resources management duties.

Even the project manager's selection process is a human resources management function, which entails some specific criteria regarding the roles and responsibilities which he/she must carry out. Some of the most important are listed below, and most of them bear conspicuous human resources management connotations: organize and motivate personnel, establish clear and concise delegation of authority, keep objectives pointed toward the ultimate goal, relate actions to schedule and budget, make all required decisions, act as the customer and upper-level and functional management communications focal point, negotiate functionally for the accomplishment of the necessary work packages within time, cost, and performance, solve all conflicts, etc. On a simplistic note, a good project manager's characteristics could be summed up as follows: good, judgment, people skills, ethical, broad thinker, focused leader, skilled decisionmaker, communicator (vertically, horizontally), dynamic, charismatic, etc. If one wants to elaborate on these features, one will realize that this blend of analytic and synthetic competencies is but the tip of the iceberg, in the sense that a project manager's having all these traits does not guarantee the success of his/her endeavor. The reason is the ever changing nature of businesses and business environments, which require permanently reshaping the project manager's profile due to the transformations occurred in the core processes specific to the field of project management. Let us focus on two such transformations: teleworking and e-business, and examine the way in which they have reshaped the way business is done and, implicitly, the modern project manager's profile.

Teleworking implies building and managing a team at a distance and often at numerous locations, that is "groups who now, and even more so in the future, will work full-time from home" (Morris, 1996, p. 14). On the one hand, this a working style which brings a lot of advantages such as lower overheads and personnel recruitment without facing the issue of relocation. On the other hand, this working style poses new and complicated problems to managers and supervisors, who have to continue to perform their managerial roles of directing, controlling and motivating their teams without having much contact with them. This evidently requires a new mental approach to the processes of team building and team management, based on four critical pillars (Morris, 1996):

- philosophy, which is the team's foundation and means that the team members have a clear vision of their goal, are confident to test new ideas, and regard failure as a learning opportunity without seeking scapegoats;
- interaction, which reflects the way the team works on the grounds of mutual respect, open and honest communication, in an environment that fosters creativity and participation;
- drive, which is the source of the team's energy and will to focus on achieving the best results;
- resource, which shows how the team functions, by using all individual talents and contributions to the common success.

Given these pre-requisites, it becomes clear that leadership skills play an essential role in ensuring the team's success by instilling the necessary vision

and motivation amongst the team members. Under these circumstances, the project manager's role is to enhance the team spirit, as well as to deal with potential grievances by maintaining regular contact with every team member. On the other hand, too much focus on individual needs may jeopardize the team Therefore, balance is necessary to keep between individual spirit. communication and team communication. Moreover, the project manager should not overlook his/her main duty, that is, channeling the common effort towards achieving the project goal. This can be done by developing a forum by means of which experiences can be exchanged, and feedback can be collected. The most common form of such forums is that of organizing meetings on a regular basis in order to reinforce one-to-one communication and benchmark the project team's performance against other partners' or counterparts'. Also, information dissemination is essential in securing the project's success. And all of the above roles and functions must be carried out by the project manager, whereas the weight of the human resources management principles in doing so is obvious. (In the annex, we present what the cited author names "The distance management" health check, i.e., a list of questions that a project manager should ask in order to determine whether he/she is on the right way or, on the contrary, whether some changes should be made to ensure the project *accomplishment.*)

The second source of project management challenges is the one generated by ebusiness, a sector that has gained tremendous amplitude and magnitude during the last decades, and is expected to grow at least at the same pace in the near future. As Porter (2002) notes, "over the past decade, a peaceful revolution driven by the explosion in IT has occurred. IT provides users greater computing power in smaller packages at lower costs, and with that computing power comes enormous capacity for change, driving process reengineering, new ways of doing business, and streamlining" (p. 177). Given and revolutionary nature of the business environment we live in, it naturally follows that it impact the very core of the managerial skills this new type of business requires. However, the fundamental features of projects remain the same, whilst the project manager's profile changes in order to counterbalance these challenges and changes. The hardship and excitement of such projects comes from the endless opportunities that IT offers, whereas the genuine benefit appears when professional are able to use these tools to improve, invent, or upgrade what we already have and apply. But however critical the role of IT in this process is, it is the people's will to learn and grow as professionals that secures project success.

When talking about people learning and growing, we actually have in mind their willingness and capacity to acquire and, most importantly, to exert the knowledge, skills, experience, and behavior imposed by the new project

environment. Considering that one can no longer regard the traditional rigid way of doing things as a viable option, we can infer that empowerment and flexible decision-making pushed down the line is one of the keys to success. As the aforementioned authors point out,

"today's workplace demands a new kind of worker. In our global world, data is dispatched in picoseconds and gigabits and this deluge of information must be sorted, evaluated, and applied. Information literacy is a set of information and knowledge age skills that enable individuals to recognize what information is needed, when it is needed, and methods for location, evaluation, use and effective communication. It is people knowing how to use what [...] the world is creating" (p. 178).

It is thus becomes clear that the roles and duties which the project manager has to do, regardless of the nature of the project and including IT projects, are fundamentally the same. What really makes the difference is *how* the project manager can contribute to the accomplishment of his/her enterprise. And the answer to the *how* question is, in our opinion, the thorough knowledge and application of human resources management in its most genuine and professional sense. To be more specific, it is the "soft" side of human resource management that offers the clue to team building, interpersonal communication, conflict solving – to name but a few aspects entailed by project management which may hamper its successful completion.

In terms of practical solutions to meet these challenges, the word of the day is "communication": honest, open communication across the project team and across the organization overall. Experience shows this is easier said than done. At the same time, experience shows this is the only way out of troubles, frustration, and pitfalls. Last but not least, it must be initiated by the project manager, and directed to the project team members. Then and only then can the team members be held accountable for their deeds, whether they are achievements or failures.

To add to the project manager's list of functions, providing the team members' with learning and growing opportunities is also the project manager's duty. Coaching, mentoring, job enrichment, or any other form of training and education that may significantly contribute to the project's overall success can and must be extensively applied in order to increase the employee's level of skills, knowledge, and expertise, which naturally impact the project's completion in an effective and efficient manner. It goes without saying that nowadays learning and training rely more and more on technology, with an

emphasis upon IT. The rapid pace of change and development in every field of business and, more generally, in every walk of life, individuals must keep up with the new situations. And this means constant learning, information, and training. Information acquiring and sharing have become constant elements of our every day life, and this can only lead to organization learning and growing.

Under the circumstances described above, it is not surprising that new professional positions have merged in order to deal with the IT challenges. We are now talking about the Chief Information Officer (CIO), who is regarded as a key executive in any modern organization, be it private or public, which is well on its way to performance. As Schubert (2004) argues, the CIO is expected "to understand and communicate important business strategies, IT organization focuses, and executive peer/partnership values relative to information technology [...], to work with external customers on behalf of the company" (p. 13). Noticeably, the range of a CIO's roles and responsibilities is rather wide, and this can only illustrate the importance of placing professionals in key IT positions. This raises the following question: what profile should a CIO in particular, as well as an IT project manager by inference.

According to the same author previously cited, the ideal candidate's profile should meet the following requirements:

- 1. display planning skills in order to formulate adequate strategies for project completion;
- 2. have strong business orientation;
- 3. have strong analytical skills;
- 4. demonstrate ability to apply IT in order to solve business issues while managing costs and risks at the same time;
- 5. identify and assess new technological developments and evaluate their usefulness to the project;
- 6. show communicative skills and be able to understand the needs and expectations of internal and external customers;
- 7. have organizational and facilitation skills;
- 8. be a good listener, a team builder, and conflict mediator;
- 9. be able to work with people at various hierarchical levels;
- 10.have negotiation skills in order to secure the necessary level of buy-in by all stakeholders to ensure project successful completion.

Should one take a quick look at the far from exhaustive list above, one will easily notice the high degree of resemblance with the teleworking project manager's profile. Notwithstanding the apparently huge gap between the nature of the two field of activity, the fundamental dimensions remain the same, as they subsume to the same large branch of project management. Moreover, the relevance of human resources management principle in smoothly running this type of business is again more than conspicuous, with an emphasis on the leadership roles such as communication, motivation, vision, conflict solving, etc. Above all these, however, is the credibility issue, which is the vital pre-requisite for any managerial endeavor, including project management. More precisely, this refers to the manager doing what he/she is preaching as a key to his/her actions implementation, regardless of the organization or project scale.

The conundrum of credibility has stirred and continues to stir debates and analyses among the management theorists and leadership practitioners. For instance, Broadbent and Kitzis (2005) consider that many managers, and project managers in particular, do not know the sources of their credibility, although they are aware of the importance of having it. Could this source be knowledge, experience, or tenure? The authors' answer is as simple and clear and one can possibly imagine: it comes from achieving the results that your superiors or leaders regard as important. And the hazard of doing otherwise is also straightforward: "Even if you deliver projects on time and under budget, if they don't help your executive colleagues meet their business goals, your credibility suffers" (p. 20).

Another idea the aforementioned scholars approach is that of how management and leadership differ, in spite of the fact that the two concepts – and practices, too – are complementary. Again, people skills play a pivotal role in ensuring project success by acknowledging that a project manager lacking vision, communication, and relationship building is doomed to fail. Also, intercultural management requires special attention on behalf of the project manager, given the team structure diversity. These differences in terms of team members' personality, education, culture, and background leads in turn to significant differences in their working style and conduct, which directly influences their labor performance and eventually the project success.

Flexibility and creativity are essential ingredients for business performance when it comes to various situations that may occur while unfolding a project. Therefore, every situation should be approached differently, in accordance with its peculiarities. There is no one perfect way to lead – it all depends on the characteristics of the situation encountered. Nevertheless, management literature suggests that three leadership styles should prevail: visionary, affiliative, and democratic. To conclude upon this short episode dedicated to leadership, one may say that effective leaders must apply a variety of styles, depending on the problem and people involved.

In the wake of the aspects examined in the previous sections of this study, one may conclude that people skills are critical in ensuring the implementation and completion of any project, regardless of its goal or purpose. Also, this conclusion falls in line with our initial study hypothesis, according to which the fundamental principles of human resources management genuinely make the difference between the success or failure of project management, due to the importance played by the interpersonal skills in any project manager's professional performance.

# CHAPTER III

# How do we measure project management success?

# - Lessons learned from the best in the field -

The purpose of the following part of our study is to clarify what exactly we mean by a successful project with an emphasis upon the best practices in the field of project management. In doing so, I will rely on Kerzner's book *Project Management Best Practices* (2006), which presents various organization's experiences in implementing projects that led to achieving global excellence at different moments in time.

It is worth noting that project management has not always enjoyed the attention it is paid to nowadays despite having been with us for decades. The main reason one may identify is that project management, by its own very nature, requires the extensive and intensive use of human resources management principles, which is both difficult and undesirable to some managers. We refer here to empowerment, team work, delayering, delegation, communication, motivation, flexibility, creativity, etc. – all the principles that characterize modern management and are not embraced by traditional autocratic managers. And this is not an easy thing to change, for changing people's mentality is the hardest thing to do, and it is more so when it comes to individuals who already occupy management positions and are not ready to give up on them.

Nevertheless, the economic crises that the world's economy underwent by the '90s forced people to reconsider the way they had been doing business, and consequently this resulted in the need for a change in the way they conducted business. Tough competition, the necessity to gain and retain customers, employees' emancipation, and globalization challenges dictated the adoption of new management and leadership styles, which reshaped the organizational processes dramatically. Among them, project management has gained ever growing importance, since it addresses all the main challenges posed by the new economic, social, and cultural environment, especially by placing people at the heart and core of business.

As a social and economic necessity, project management theory and practice has evolved in time, from something good or desirable for an organization to have to a way of doing business to achieve performance. Skeptics may have regarded it as another management fad, but reality has proved them wrong by at least two apparently contradictory trends: on the one hand, some organizations keep their project management strategies secret and locked, for they are the key to success and competitive advantage; on the other hand, there are organizations which share their knowledge and experience in project management hoping to enlarge useful data bases and to learn from other organizations' best practices, starting from which they can develop their own project management strategic planning.

Mention should be made that in practice project management has been with us for decades, but after World War II and until the '60s it carried some misconceptions, which included the following:

- project management applies to large projects only;
- project management is designed for government projects only;
- project managers must be engineers with advanced degrees;
- project success is measured in technical terms only.

However, the later developments in all economic sectors, as well as in management theory and practice have led to the widening and deepening of project management understanding and applying. Consequently, project management was adopted by more and more companies, mainly as a result of technological progress, increased attention paid to the research and development area, ever growing amount of information available, etc. Naturally, as project management developed, so did the role of project managers. Instead of continuing to be an organizer and a controller, the project manager had to be more of a leader, a motivator, a facilitator, a negotiator, etc. In other words, his/her "hard", technical roles were slowly but steadily replaced or rather accompanied by the "soft" ones, dealing with people's needs and expectations. This is not surprising given the fact that employees became more and more educated and viewed as the organization's most important asset.

This is the reason why the eighth and the ninth decades of the last century witnessed a shift in the project management theory and practice, in which some of the main managerial duties changed fundamentally: decision-making pushed down the organizational hierarchy, trust in the peers' decisions, easy adaptation to an ever changing environment, both horizontal and vertical work flow, more focus on customer aspects, innovative organizational design, etc.

In a dynamic world as the one we live in today, organizations need sources of stability that can sustain their performance, reputation, and survivability in the market. And this is how and why the need for capturing best practices was born. Nevertheless, one should make sure that one has a consistent comprehension of what the term "best practices" means. As a result, we will present some of the ways in which it can be understood, as well as the way in which this understanding has evolved in time. Thus, "a best practice might be:

- something that works
- something that works well
- something that works well on a repetitive basis
- something that leads to a competitive advantage
- something that can be identified in a proposal to generate business
- something that keeps the company out of trouble and, if trouble occurs, the best practice will assist in getting the company out of trouble" (p. 12).

Considering that the list above presents best practices in a progressing manner, one may infer that best practices themselves have evolved in time, and so has project management theory and practice. Therefore, strategies have appeared to instill the new project management approach and culture in modern organizations seeking success, performance, and competitive advantage. Consequently, the need for best practices was born, in order to provide some guidelines to gaining competitive edge by means of project management principles.

Mention should be made that best practices may reside with one's own organization, or with external ones. Among best practice sources, one may list various publications, seminars, symposia, relationships and partnerships with other professional entities, research papers, graduate theses etc.

Coming back to project success definition and measurement, primary and secondary factors are used:

- primary factors: time, cost, quality, customer's acceptance;
- secondary factors: customer's reference, commercialization, financial success, technical superiority, strategic alignment, health and safety, environmental conformity, corporate reputation, ethical conduct etc.

Provided that we have reached a common understanding concerning what best practices in project management are, one may wonder what an organization should do with its portfolio of best practices: guard it as a secret, or share it for common benefits? The answer is somewhere in between, for "some best practices are common knowledge and we would certainly share this information. But we view the transitioning risk template as proprietary knowledge not to be shared" (p. 29).

A concept closely connected to best practices is that of excellence, which is one of the most important desiderata of a competitive modern organization. Project management excellence is viewed as a continuous flow of successfully managed projects, and this implies the efficient and effective use of a project management methodology. However, although most theorists and practitioners agree on these ideas, there are still debates concerning the way in which excellence is defined. This results from the truism according to which every organization regards success differently, according to its mission, vision, goals, objectives, culture, standards etc. In spite of the wide range of perceptions, one may agree to accept the following understanding of excellence in project management: strict adherence to scheduling practices, regular senior management oversight, formal requirements change control, formal issue and track tracking, formal resource tracking, formal cost tracking. At the same time, Kerzner advances a sum of skills that a project manager should display in order to successfully complete his/her tasks: strong communication and management skills, project management experience, strong organizational skills, ability to oversee and coordinate multiple resources and activities. Should one examine this list of skills, one will easily notice that the successful project manager's profile requires the exercise of clear human resources management duties, which falls in line with the purpose of the present study.

Nonetheless, having and applying a certain project management methodology do not guarantee the achievement of excellence; therefore, monitoring, correction and feedback collection are required. Also, the external environment factors play a crucial role in project management success, with a special attention paid to the frequent, deep, and often dramatic changes that occur and affect the flow of activities. The current business environment is sometimes described by means of the acronym VUCA – that is, volatile, uncertain, complex and ambiguous, which makes it hard to comprehend and to handle. Technological developments and changes in customers' tastes, preferences and expectation do nothing but add to the burden of managing change.

As a result, project management methodology has to change itself in order to adapt to the turmoil characterizing the organization both externally and internally. In the wake of this complex of factors, project managers themselves need to update and upgrade their knowledge and skills to be able to face these challenges: "managers on all levels should be committed to the changes and develop a vision that calls for the development of project management systems along with the rest of the organization's other business system" (p. 140).

A general trend of the last decades has been the adoption by many organizations of project management methodologies that must be aligned with the organization's strategy by placing emphasis on choosing a project based on its capacity to meet the corporate scorecard objectives, increasing labor efficiency, standardize processes to enhance data clarity to support senior management's decision-making etc.

Given the complexity of the aspects brought forward so far, the need for project managers' education, training and qualification has become more and more stringent. This can only highlight the importance of applying human resources management principles in project management as an ingredient for success. Training needs can also be traced down by benchmarking individual performance development plans against the technical maturity model for project management, and the tools used in the process covers a wide range of areas: induction, coaching, mentoring, web-based seminars, specialized courses etc. Therefore, from the analysis above, one may easily notice that the principles of human resources management plat a pivotal role both in the project manager's training and education and in the way in which the project manager carries out his/her tasks in order to successfully complete the assigned project.

# **CHAPTER IV**

# Conclusions and recommendations concerning the use of human resources management principles in project management

Notwithstanding the fact that our study has not focused on examining the nature, characteristics and philosophy underpinning project management theory and practice, we have regarded the human resources related aspects as an essential part of project management starting from the assumption according to which people are the most important and most difficult to manage resource of any organization.

As Lock (2000) argues, "the efficient organization of a project implies the existence of a clear chain of command. It also means that every team member knows exactly what they are expected to do in order to ensure the project success. All these aspects belong to the management communication framework and are critical to the motivation of every employee" (p. 11). Starting from the idea that a motivated employee is productive and enthusiastic in performing his/her duties within the project, it naturally follows that an ill informed group, in which nobody knows exactly what they have to do and what their role is inside the project, is hard to manage, slow in achieving results, costly in operating, and a source of severe frustrations.

What the project manager really needs to do is to make sure that adequate communication channels are in place at all levels of the organization to allow for the project monitoring, feedback collection, and information sharing. However self explanatory these factors may seem, their application in practice is easier said than done, for it requires that the project manager should be an effective leader in the real sense of the word. Building and especially maintaining the team spirit is a difficult thing, which takes time and effort on the manager's side. Besides, time and effort dedicated to the team members must be accompanied by special personality traits such as responsibility and accountability, as well as special approaches to people and the development of interpersonal relationships. For instance, a potential type of successful project manager may be the one who commands fear and expects that everything he/she says is regarded as an order and executed immediately.

On the other hand, a different type of project manager may be the one who obtains the same results by means of persuasion, that is, kindly but firmly. The essential aspect in this analysis is the ability to motivate people, regardless of the methods applied, for a real expert in the field is able to change and adapt his/her management style according to each particular situation and individual. Nevertheless, most project members are satisfied whether their project manager is capable of displaying competence, making clear decisions, giving clear and achievable instructions, delegating tasks and responsibilities, listening and offering good advice, showing confidence and enthusiasm and being a role model, thus gaining the employees' respect and support (Lock, 2000).

Other features that a successful project manager should prove have to do with receptiveness in the sense that he/she must be able to discern what is important and relevant from what is not. Most project managers should accept that most of the information which they receive is incomplete, unrealistic, inaccurate, confusing, or simply wrong. Lack of information, on the other hand, is equally frustrating. Customers' instructions or approvals, contractors' or distributors' feedback, delaying documents can all be sources of inexistent or incomplete information.

So far, we have highlighted some of the challenges posed to the project manager when dealing with people and information flows. The question we feel that we need to address now is what can be done to meet these challenges in order to make the project manager's tasks easier and to run the project smoothly. Thus, one of the solutions to overcome these obstacles is that of providing the project manager with support both by the top management and by the project team members. Lock's (2000) opinion in this respect is illustrative:

"However experienced, competent, enthusiastic and clever the individual appointed as a project manager may be, one cannot expect him/her to work efficiently without adequate support and cooperation. These include he entire personnel's support, whether they are subordinated to the project manager or not [...]. The project manager must be motivated, too, and so must be all the project members, and top managers [...] can help in this respect by giving their subordinates training opportunities whenever new management systems and technique develop" (p. 33).

The project manager's main manifestation of authority comes from his/her own personality, as well as his ability to persuade and motivate people. In nowadays' organizations, where employees are educated and liberated, discipline no longer

means the use of a rigid, authoritarian management style based on fear or coercion. In the long run, it is more productive to foster an organizational climate that nurtures and sustains personal satisfaction and individual growth both for the project manager and for the project team members.

In order to ensure the organization's competitive advantage, the project manager must keep up with the latest developments in management theory and practice, which means permanent learning. This is much more than attending a two-day course on a particular topic. Instead, training and education refers to attending seminar, conferences and other similar events, which enhance a constructive exchange of ideas, opinions, experiences etc. The follow-up of this activity is the learning process inside the project team, just like in a cascade effect. If people embarked in the project clearly understand the techniques, methods and procedures involved in their tasks, as well as the reason why they are used, it is more likely that they will cooperate more efficiently, which will impact the whole endeavor positively.

Human resources management activities inside the project have a strategic and paramount importance in project management success from at least three points of view: personnel selection; career development in a constantly changing environment; knowledge management and learning. As Turner and Simister (2004) notice, "there are various staff selection methods, according to how essential and irreplaceable or, on the contrary, how peripheral and easy to find their skills are in the labor market" (p. 642). In the light of this consideration, the main procedures related to staff selection in a project oriented organization are the following: headhunting for top managers and experts; networking and using personal contacts to recruit potential candidates; staff selection by means of testing them; college recruitment. In other words, project oriented companies are more prone to informal practices, in the sense that they are more focused on finding candidates that meet their organizational culture and develop together with the organization. Also, the knowledge and skill they possess is less important than their adapting capacity to the dynamic environment of project focused organizations, particularly due to the changes occurred in customers' requirements, tastes and standards.

Outsourcing is another popular human resources management method, which ensures a high degree of numerical flexibility. This serves the organization's needs as project centered companies have temporary activities due to the limited life span of projects. The use of this approach is difficult, however, and poses obstacles to people's motivation and job satisfaction: whereas the organization's stability is ensured by a core of permanent or at least long staying employees, the peripheral or dispensable ones are dissatisfied and therefore less productive. Considering that project based working style is mostly required in innovative and complex fields of activity, this state of things causes serious problems in terms of project quality and timeliness. As a consequence, organizations having hardships in dealing with such situations are attempting to implement culture change programs, staff training and socializing etc. in order to smoothen the transition to a volatile and unstable working environment.

Another matter worth being considered is the rapid dynamics of the way in which career development and management are regarded. Short term employment and personnel turnover are but two of the challenges posed by project orientation in many field of activity, whereas lifelong employment has gradually become a thing of the past. The old traditional image of a career was that of a path made of bricks and stones laid by the individual, each brick and stone standing for a new stage in his/her career. Nowadays, however, this image has been replaced by that of a surfer, who needs to stay firm on the wave and look for opportunities to catch the new wave. Another metaphor of a career is that of a spiraled ladder, which goes up incrementally in a fan-like development where the fan magnitude represents the knowledge and experiences gained in various organizations and learning opportunities (Lock, 2000).

Career development in project centered organizations depends, to a large extent, on the employee's initiative and willingness to learn new skills, often in a very short period of time. At the same time, the employee must assume the responsibility for managing his/her own career and to use his/her knowledge and skills to progress in career. We are thus dealing with a whole new perception of a career, which implies initiative, personal responsibility, flexibility, creativity, innovation etc.

Apart from the challenges briefly examined in the previous paragraphs, organizations are facing a motivation problem, too: whereas traditionally promotion was regarded as an effective motivating tool, this can no longer be used as such, because organizations are more and more subjected to delayering and flattening due to financial constraints. As a result, project oriented companies must find alternative compensating methods and encourage their staff to adopt a new idea of career progress, as well as the prestige and respectability once conferred by promotion to a superior hierarchical position.

Starting from the idea expressed in the previous paragraph, the concept of dual or multiple careers has emerged as a way to overcome the problems caused by promoting technical experts to top positions implying high managerial and administrative responsibilities (Turner and Simister, 2004). In this respect, the authors mention a model of competence consisting of a triangle. Each side of this triangle represents one of the following competences, respectively: human competence, technical or professional competence, and business competence. This model underpins the original hypothesis of our study, according to which the principles of human resources management can and must be used in order to ensure project management success. Also, the aforementioned scholars underline that the inconsistent application of this triangular approach leads to organizations losing their most valuable employees due to the fact that technically skilled personnel are sometimes appointed to top management functions despite that they do not have the necessary abilities to accomplish the afferent roles.

Another trend in today's organizations is to create diverse career paths that do not follow the dual careers which place technical positions before operational positions. The fields that most conspicuously reveal this tendency are human resource management, marketing and sales. This practice contradicts the traditional one that offers a great advantage to people, that is, every employee belongs to a well defined comfort zone that provides him/her with careers opportunities matching his/her skills, background, culture, needs and expectations. At the same time, this comfort zone is the place which ensures that the staff have learning opportunities contributing to increasing their work motivation and, consequently, to increasing their productivity. The importance of learning – as a human resources management tool – to securing project management success (as well as any organizational process success) cannot be overstated. As Gardner (1995) pointed out almost two decades ago,

"Everyone, from child to senior citizen, will become life-long learners. Traditional concepts of education and training will be challenged and subsequently changes. The principal knowledge disseminators of the 21<sup>st</sup> century will be businesses, not academic institutions, as 'earners' are forced by economic circumstances to become perpetual 'learners' " (p. 12).

We are thus crossing a fundamental transitional process, particularly in mentality, both on the employees' side and on the employers' side. We can no longer talk about long-term job security, and instead we should focus on the concept of employability, which represents an employee's capacity and ability to be employed due to his/her portfolio of skills. It is in this context that more and more theorists and practitioners draw our attentions to the knowledge-based society that the entire world has witnessed and will continue to witness in the foreseeable future. The term "knowledge" mainly refers to the knowing things and being able to out in practice this information rather than acquiring knowledge for the sake of being informed. Placing education and training opportunities at the heart of doing business, regardless of the field of activity one is discussing, is an irrefutable piece of evidence of the importance of observing the principles of human resources management. If we remind ourselves that the purpose of the present study is to analyze the use of human resources management in order to smoothen project management processes, the role of such principles becomes even more evident. This is due to the fact that project management, perhaps more than any other business endeavor, requires fast responses, adaptability and flexibility to the quick and dramatic changes posed by the present environment worldwide, dominated by economic, social, cultural, political, military and technological revolution.

To conclude out study, I would like to quote Gardner (1995) again, who clearly states the critical role played by investing in education in the workplace – as an essential component of human resources management – in tomorrow's organizations pursuing competitive advantage in a turbulent millennium:

"The basis for this investment is that businesses which know how to convert information into knowledge will be the most successful in the future. There is an old saying that 'knowledge is power'. The most powerful businesses of the 21<sup>st</sup> century will doubtless be those which develop their knowledge bases and the collective brainpower of their staff most effectively. In so doing, they will be assuming a new and expanded role in the education system of the future. Within a decade, more people will be 'learning' at their workplace than are attending full-time educational institutions. This will change not only our employment prospects, but our leisure activities and our life-styles" (p. 13).

This is the reason why coaching and mentoring have already become popular educational and training methods, as the aforementioned author envisaged. Since we acknowledge that these tools belong to the human resources management, the usefulness of human resources management in any business, especially in project management oriented organizations, speaks for itself. This acknowledgment shows once again the benefits of coaching and mentoring in the workplaces (Yemm, 1995). Moreover, there are organizations - in the United Kingdom, for instance – which pay particular attention to people aspects as a significant selection and retention technique. Such organizations also seek for a formal recognition of this matter by providing all the conditions for the Investment in People Award, which proves that an organization offers its employees all the motivating opportunities - including education, training, promotion, appraisal, fair treatment etc. - in order for them to perform at the necessary standards. The main benefits which such organizations enjoy are related to improving staff morale with a direct impact upon organizational performance (Collins, 1995). It is thus clear that the appropriate use of human resources management principles can only result in ensuring organizations' well being.

Considering the project centered organizations have already become a significant part of nowadays' business stage, one may infer that the principles and approaches previously examined pertain to being applied and enforced in such organizations for they are prone to doing business in an insecure and unstable business climate. This is why such organizations depend on their people even more that other types of institutions, because their employees are hard to replace due to their valuable skills, knowledge, and personal networks. Consequently, project oriented structures rely on the effective utilization of human resources functions, with an emphasis on personnel recruitment, retention, motivation, promotion, and appraisal systems. We can thus conclude that the initial assumption of our study – that is, the importance of applying the human resources management principles in project management, including the project manager's roles and duties – has proved to be accurate and with profound implications in securing project management success.

# ANNEX

# The "Distance Management" Health Check

- Do you think of your group as a team?
- Do your group members consider themselves as part of a team?
- Can you define clearly your vision for the team?
- Do the team have a similar vision?
- How often and by what means do you check whether your team members feel that they have sufficient contact with you?
- How do you ensure that your team are kept up-to-date on general company matters?
- How many sub-projects are currently being led by team members?
- How many meetings are currently planned?
- What changes in team behavior resulted from your last three meetings?

# **Building a house**

# **MAJ Milos TOMASEVIC**

# **PROJECT NAME:**

#### **Building a house**

# **PROJECT SPONSOR:**

My family

# **1 BUSINESS CASE**

#### 1.1 Question of choice – buy a flat or building a house

My family wants to improve housing conditions.

We rent apartment for 200 €every month. My family have fee in that amount from the Army. That amount of money is thrown away, because both Army and my family don't have benefit (only my landlord has one).

Serbian Army has a loan program for solving apartment problems.

Due to solve the problem, anyone who is interested, has to take a loan from the bank, and after signing contract Army will continue to give him fee which is increased for 10% in next 20 year.

In accordance with my monthly salary, maximum amount which I can get from the bank is about  $50.000 \in$ 

Unfortunately, we are left to our own, wether we are buying an apartment or building a house.

#### **1.2** Buying a flat

First of all you have to find appropriate apartment, after that solve all administrative problems, and at the end sign loan contract with the bank and buy an apartment. It is the easiest way to solve the problem. But even in that way there are some gaps that should be overcome:

- You can consider only apartments in buildings that have all documentation that will undoubtedly lead to registering. Less than 30% apartments in Belgrade is registered, and choice is considerably narrowed,
- When you find the desired apartment, in order to ensure that someone else will not buy it until you get a loan, you need to place a deposit, which usually ranges from 10% to 15% of the purchase price of the property. A big problem is to give that money and that you are not sure what amount of loan you can get and if you get it at all,
- Even if you get a loan, some of the apartment sellers will not wait for the rest of the money longer than one manth,
- Whole procedure is very long and you will be at least twice a week for a few hours away from work and run around for variety confirming,
- Do not take any steps immediately before or after the parliamentary elections, falling or forming a government, the announcement of the introduction or abolition of taxes, etc. because procedure then takes at least two times longer. Such things are very often in transition country like Serbia.

After all complications there is the question, whether this will solve my problem?

I have wife and two sons, and maybe I will have more children, who know. We are living in a small apartment – it is about 50 m<sup>2</sup>. That apartment is not big enough to satisfy all needs of my family (we need one more bedroom) currently, and situation will be worst for sure (because children are growing up and each of them will have to have theirs` own room).

Taking a maximum credit from the bank we will be able to buy apartment of the same size that we already rent, and that will not fully solve our problem.

#### **1.3** Building a house

One of solutions to fully solve my problem, with restricted budget (50.000  $\oplus$ ), is to build our own house in suburb which will have 100 m<sup>2</sup> and it will satisfy all our needs.

In the very beginning it is very hard to find a suitable plot. There are several things to check before buying:

- Check whether and what you can build on this plot,

- Check right to use the land,
- Make sure that the land is not agricultural,
- Get the complete list owner, etc.

Errors and contingent details are not uncommon. It is better to check everything personally.

Have a good lawyer with experience in land transactions is a big advantage.

After that you have to do a project for the construction, obtain all licenses, find Constracor Company and start building a house.

You should to include several more things in the cost of building a house:

- Material (sand, cement, lime, bricks, roof material, carpentry, etc.),
- Shore for electricity, water, sewage, etc.,
- Salary for the constractors and transportation costs,
- Other unforeseen expenses.

After a short research on the Internet and consultation with colleagues and friends who have already built a house, I made estimation of costs:

| No  | Activity   | Estimated cost |
|-----|--|----------------|
| 1.  | Buying an appropriate plot                           | 15.000 €       |
|     | Collection of various documentation, project         |                |
| 2.  | preparation, various permits, shore for electricity, | 5.000 €        |
|     | water, sewage etc.                                   |                |
| 3.  | Buying a material for construction                   | 15.000 €       |
| 4.  | Salary for the constractors and transportation       | 12.000 €       |
|     | costs  | 121000 2       |
| 5.  | Other unforeseen expenses                            | 3.000 €        |
| TOT | AL   | 50.000 €       |

After that we made a brief analysis about living in a flat or house:

| ITEM                                  | HOUSE IN<br>A SUBURB | FLAT IN<br>A CITY |
|---------------------------------------|----------------------|-------------------|
| Comfort of living                     | +                    | -                 |
| Cost of the maintenance               | -                    | +                 |
| Amount of tax                         | -                    | +                 |
| Costs for heating, electricity, water | -                    | +                 |
| Crowd, noise, air polution, etc.      | +                    | _                 |
| Parking place, garage, courtyard, etc | +                    | -                 |

| ITEM  | HOUSE IN<br>A SUBURB | FLAT IN<br>A CITY |  |  |  |
|---|----------------------|-------------------|--|--|--|
| Proximity to schools, hospitals, supermarkets, etc. | -                    | +                 |  |  |  |
| Safety of kids and place for games                  | +                    | -                 |  |  |  |
| Relations whith neighbors                           | +                    | -                 |  |  |  |
| Opportunities for hobbies and afterwork bussines    | +                    | -                 |  |  |  |

At the end my family conclude that it is more profitable for us and we will get more benefits if build house. We will use our savings to purchase the plot and take a loan from the bank for missing funds.

Of course, there is always a challenge to test yourself and find own possibilities.

For this reason, this project will be individual, and I will be a project manager.

# 2 PROJECT SCOPE MANAGEMENT PLAN

#### 2.1 Project goal

**The project goal is** to permanently solve my family housing problem with construction of family house in Belgrade suburb.

#### 2.2 **Project objectives**

In objective process writing, I have been guided with idea: If criteria's for objectives is higher, motivation to achieve the objectives will be bigger.

A factor that played a major role in the process of writing goals was time. Main idea was that all works related to "paperwork" should be completed during the winter and construction works should be carried when weather conditions are favorable.

**For the goal defined above**, I identified (according folk expression: "House is built from the ground up, not from the roof.") the following **objectives:** 

- By the end of December, 2011. I will buy a suitable plot (good position, apropriate size, alowed building) in Belgrade suburb up to 15.000 €
- 2. By the end of February, 2012. I will take a lone from the bank in amount of 35.000 €

- 3. By the end of March, 2012. I will obtain a building permit
- 4. By the end of April, 2012. I will obtain technical conditions for connection to the existing infrastructure (especially for the electricity and water shores) for house building.
- 5. Until the beginning of May 2012. I will find a construction firm and sign a preliminary with them
- 6. Until the beginning of May 2012 I will buy all necessary material for starting hause building and stored them on the plot.
- 7. By the middle of June 2012. all constructor works in "gray" phase will be done.
- 8. By the middle of August 2012. works related to elctricall and water instalation, carpentry and heating will be done.
- 9. By the end of August, 2012. finall works will be done.

#### 2.3 Project activities and sub-activities corresponding to objectives

#### **1. Buying a suitable plot**

- 1.1. Check that the plot is covered by detailed regulation plan
- 1.2. Check the right to use the land
- 1.3.Request a copy of the plan
- 1.4. Check category of the land. Maybe it is agricultural land and if it is check the class
- 1.5.Get the complete list owner
- 1.6. Get certified statement of waiver of preemption by the co-user

#### 2. Taking a lone from the bank

- 2.1. Gathering information from bank
- 2.2. Applying for credit assessment
- 2.3. Collection of legal documents
- 2.4. Loan Agreement
- 2.5 Realization of loan

#### **3.** Obtaining a building permit

- 3.1. Obtaining a location permit
  - 3.1.1 Development of the preliminary architectural design of planned construction
- 3.2. Obtaining a building permit

#### 4. Getting the technical conditions for house building

- 4.1 Getting the technical conditions for connection to the existing infrastructure
  - 4.1.1 Getting the technical conditions and connection to the electric grid
  - 4.1.2 Getting the technical conditions and connection to water distribution

grid

- 4.1.3 Getting the technical conditions and connection to gas distribution grid
- 4.1.4 Getting the technical conditions and signing contract for sewage and garbage removal

#### 5. Finding construction firm and signing preliminary

- 5.1. Making a list of construction firms with best qualification and prices
- 5.2. Agreement with the selected firm and the signing of preliminary contract

# 6. Buying all necessary material for starting house building and storing materials on the plot.

- 6.1. Making a list of construction material companies with best conditions
- 6.2 Construction of stockroom for storage tools and materials
- 6.3 Buying material for starting house building

#### 7. Constructor works on building till "gray" phase

- 7.1 Plot metering
- 7.2 Digging of foundation
- 7.3 Construction of foundation and ground plate
- 7.4 Setting of plate installation
- 7.5 Rough construction works on the ground, end with the plate above the ground
- 7.6 Rough construction works on the attic
- 7.7 House covering
- 7.8 Setting of carpentry

# 8. Works related to electrical and water installation, carpentry, façade and heating

- 8.1 Electrical supply installation
- 8.2 Water supply installation
- 8.3 Sewage installation
- 8.4 Indoor plastering
- 8.5. Creation and setting of interior stairs
- 8.6 Setting of sanitary
- 8.7 Setting of external facade
- 8.8 Setting of parquet
- 8.9 Painting works
- 8.10. Connection to gas distribution grid
- 8.11 Heating installation

#### 9. Final works

9.1 Setting of cable TV

- 9.2 Telephone and internet connection
- 9.3 Cleaning and decorating of yard
- 9.4 Small repairs

A detailed description of all activities is shown in Appendix No 1. – Description of activities and in the Gantt chart annexed to the hereby project.

#### **3 HUMAN RESOURCES MANAGEMENT PLAN**

This project is a textbook example of a Management by objectives (MBO) strategy.

Algorithm for this project is very simple.

As can be seen in the previous section, each objective has only one activity which is divided into sub-activities.

Very little activities may take place simultaneously in two different objectives. Therefore, it is easier for project management.

Concept of leadership is focused on achieving each objective individually.

The objectives are measurable and their achievement is an indicator of the successfulness of the work. The realization of each objective is a milestone and has motivational effect.

Various individuals and groups of people would be included in different stages of this project. Assistance of an experienced lawyer is required during the purchase of plot. It would be necessary to engage an architect in order to obtain a building permit.

If plot was well chosen should not be problems at this stage of the project. If there are any problems, maybe we should give up of buying the plot. This issue will be explained in more detail in chapter Risk management.

After plot buying and solving all problems related to paperwork when you think that torture came to the end, the most difficult part of job comes. It is necessary to find a good construction firm with experienced manager (hereinafter CF manager). CF manager is one of the key figures in the further implementation of the project. Agreement and cooperation with CF manager and its employees leads to converting the project objectives in the specific individual tasks. All this will have resulted in increasing employee motivation and better assignments. CF manager must clearly explain to each worker his job, what results are expected of him and what his responsibility is. In other words, he has the task to make a team from a group of people.

During the construction it is necessary to reach agreement about the objectives and possibilities of their realization. Otherwise, pre-set objectives will only be a "dead letter on the paper".

It is necessary to analyze the achieved results and compare them with set objectives after each activity.

# 4 COST MANAGEMENT PLAN

In this part of the project, following work breakdown structure, I tried to calculate the **definitive estimates** and to verify predictions from beginning of this story.

Resources are allocated as follows:

- People: Lawyer, architect, CF manager, craftsmen, laborers, carpenter, electrician, plumber, painters, heating master, ceramist and IT master
- Materials for building: (sand, cement, lime, bricks, roof material, carpentry, etc.),
- > Equipment (truck, backhoe, concrete mixer, hand tools for house building, etc.)

Predicted approximately cost is verified after calculation:

| - human resources cost        | 10.340 € |
|-------------------------------|----------|
| - material and equipment cost | 24.893 € |
| - cost of the plot            | 15.000 € |
| - total project cost          | 50.233 € |

Cost breakdown structure is shown in:

- Appendix No 2. Human resources requirement table and
- Appendix No 3. Materials and equipment requirement table
- Project Manager Human Resources Costs Sheet annexed to the hereby project.

# **5 TIME MANAGEMENT PLAN**

The estimated implementation period of this project is: 31.10.2011. – 21.08.2012. or 212 days.

The start date and the end date of each activity and sub-activity are presented in:

- Attachment No 1. Description of activities and
- The Gantt chart annexed to the hereby project.

# 6 QUALITY MANAGEMENT PLAN

The houses building project is specific because the deliverables are clearly visible after the attainment of each individual objective.

It is essential for all people who participate in the project to possess appropriate professional, labor and moral qualities. All people should be well trained and have appropriate certificates. It is only way to achieve an adequate quality of deliverables.

Similar principle is valid for materials and equipment. A building permit and all technical conditions for construction which are issued shall be in accordance with the JUS standard of habitation.

All materials and equipment should satisfy JUS standard of construction.

List of deliverables and people who are responsible for their quality is shown in

- Appendix No 4. – Quality management plan.

# 7 COMMUNICATIONS MANAGEMENT PLAN

In accordance with the goal, it is obvious that main stakeholder of this project is my family (or me as its representative). Since I am the main decision maker in this project, the largest part of communication will take place between me and the other stakeholders.

Other stakeholders have not big demand to communicate between themselves.

Format of message during communication with official institutions generally would be writing form. Communication with other stakeholders would be orally or by telephone.

The roles of other stakeholders vary depending on project phase.

Categories, type, expectations, concerns and power/interest of all stakeholders are detailed in:

- Appendix No 5. - Stakeholder communication matrix.

# 8 RISK MANAGEMENT PLAN

Most of risk factors are in the first phase of the project. The future of the project depends on whether the plot on which we intend to build a house has proper documentation. If documentation is not valid it is better not to buy the plot and do not expose to risk the whole project.

Certainly it is impossible to start building if there is no credit from the bank.

Certain risk factors exist in the final stage when lack of money due to budget overruns could seriously jeopardize the completion of project. In this situation we can move into the completed part of the house and finish other works later.

Risk factors are presented in: Appendix No 6. – Risk management Matrix.

#### Appendix No 1

#### Description of activities

|  | Activity   | Sub - activity   | Description   | Start date      | End date            | Responsible   | Cooperate   |
|--|--|--|---|-----------------|---------------------|---|---|
|  | 1. objective - By the en   | d of December, 2011. I will buy  | a suitable plot (good position, apropriate size, alowed building) in Belgrade   | suburb up t     | o 15.000 <b>€</b> . | · ·   |   |
|  | Activity<br>1. objective - By the er<br>1. Buying a suitable<br>plot<br>2. objective - By the e<br>2. Taking a lone from<br>the bank | 1.1. Check that the plot is<br>covered by detailed regulation<br>plan  | If you are buying land for the construction, the first thing to check is<br>whether and what you can build on this land. For that information, you<br>need to know if there is a detailed regulation or detailed urban plan for the<br>area where the plot is. If not, you probably will not be able to legally build.<br>To find the right information about the land, you must go to the Secretariat<br>for Urban Planning and Construction.        | 31.10.<br>2011. | 11.11.<br>2011.     | Project<br>manager  | Seller of the plot,<br>Municipality<br>Secretariat for Urban<br>Planning and<br>Construction. |
| Activity<br>1. objective - By the er<br>1. Buying a suitable<br>plot<br>2. objective - By the e<br>2. Taking a lone from<br>the bank | 1.2 Check the right to use the land  | The seller of plat has to obtain the Solution of Article 84 (Law on Planning<br>and Construction) from the municipality which plot belongs, as evidence<br>of his right of use on undeveloped building land. | 31.10.<br>2011.   | 11.11.<br>2011. | Project<br>manager  | Seller of the plot,<br>Municipality<br>Secretariat for Urban<br>Planning and<br>Construction. |   |
|  | 1. Buying a suitable<br>plot   | 1.3 Request a copy of the plan   | The seller must have a copy of the plan issued by the Institute of Geodesy. A copy of the plan contains a list of land users based on information in the Institute of Geodesy. This list has to agree with a list of users in the title.  | 14.11.<br>2011. | 25.11.<br>2011.     | Project<br>manager  | Seller of the plot,<br>Institute of Geodesy.  |
|  |  | 1.4 Check category of the<br>land. Maybe it is agricultural<br>land and if it is check the class   | On the copy of the plan, I will find more useful information such as types<br>and classes of land and real land surface. If it is agricultural land I will<br>have to change the use of plot before I start to build.   | 14.11.<br>2011. | 25.11.<br>2011.     | Project<br>manager  | Seller of the plot,<br>Institute of Geodesy.  |
|  |  | 1.5 Get the complete list owner  | I should also get the proprietary list from seller. This document is issued<br>by the Second Municipal Court.<br>The names of users on a solution based on Article 84 and the owner's<br>name list must be the same.  | 28.11.<br>2011. | 16.12.<br>2012.     | Project<br>manager  | Seller of the plot,<br>Second Municipal<br>Court.   |
|  |  | 1.6. Get certified statement of<br>waiver of preemption by the co<br>user  | If you buy only one part of a larger parcel, users of other parts of the plot<br>have preferential rights in relation to you. Thus, the seller must offer to all<br>co-users same price you agreed with the seller. If one of the co-user is<br>interested and buy that part of the plot, the story is over. If none of the co-<br>user is not interested, their statements to waive part of that should be in<br>writing and certified by the court. | 19.12.<br>2011. | 29.12.<br>2012.     | Project<br>manager  | Seller of the plot,<br>Co-users.  |
|  | 2. objective - By the er   | nd of February, 2012. I will take  | a lone from the bank in amount of 35.000 €  |                 |                     | •   |   |
|  |  | 2.1 Gathering information from<br>bank   | Go to more banks and collect all the information. Choose a bank and best model of loan. Obtain a list of documents you need to make the next arrival to the bank.   | 30.12.<br>2011. | 12.01.<br>2012.     | Project<br>manager  | Banks   |
|  | 2. Taking a lone from the bank   | 2.2 Applying for credit assessment   | Based on the submitted documentation and access to Credit Bureau report bank determines the credit worthiness and the maximum loan amount. A certificate that confirms approval of the loan shall be issued by bank (valid for 60 days).  | 13.01.<br>2012. | 19.01.<br>2012.     | Project<br>manager  | Selected Bank,<br>Serbian Army  |
|  |  | 2.3 Collection of legal  | Bring a correct and complete documentation of the property to the bank  | 20.01.          | 02.02.              | Project   | Selected Bank   |
|  |  | 2.4 Loan Agreement   | Signing of Loan Agreement and obtaining all documents needed for  | 03.02.          | 09.02.              | Project   | Selected Bank   |
|  |  |  | nypothec<br>Dealing certified documentation required for hypothec and transfer of   | 2012.           | 2012.               | manager<br>Project  |   |
|  |  | 2.5 Realization of loan  | funds on the account  | 2012.           | 2012.               | manager   | Selected Bank   |

| Activity                                   | Sub - activity  | Description   | Start date      | End date        | Responsible        | Cooperate   |
|--|---|---|-----------------|-----------------|--------------------|---|
| 3. objective - By the en                   | d of March, 2012. I will obtain a   | building permit   | •<br>•          |                 |                    |   |
|  | 3.1. Obtaining a location<br>permit   | The location permit is the first step in the construction procedure of a legal object. It is obtained based on a preliminary architectural design of the building project. It provides all conditions and data needed for the making of the technical documentation in conformity with valid planning documents | 01.03.<br>2012. | 14.03.<br>2012. | Project<br>manager | Real estate agency,<br>Municipality<br>Secretariat for Urban<br>Planning and Const. |
| 3. Obtaining a building<br>permit          | 3.1.1 Development of the<br>preliminary architectural<br>design of planned construction             | Architectural design consists of a text item (description, purpose and characteristics of the object, technical solutions, the method of heating etc.) and 4 graphic items: situational solution, typical elevations, facades, sections of the building, floors, roof base                                      | 01.03.<br>2012. | 14.03.<br>2012. | Project<br>manager | Real estate agency,<br>Municipality<br>Secretariat for Urban<br>Planning and Const. |
|  | 3.2. Obtaining a building<br>permit   | Having obtained the location permit, it is time to prepare the complete<br>project documentation in order to obtain the proper building permit. The<br>project has to be done in accordance with the construction regulations<br>contained in the location permit.  | 15.03.<br>2012. | 28.03.<br>2012. | Project<br>manager | Real estate agency,<br>Municipality<br>Secretariat for Urban<br>Planning and Const. |
| 4. objective - By the en                   | d of April, 2012. I will obtain tec   | nnical conditions for connection to the existing infrastructure (especially for t   | the electricit  | y and wate      | r shores) for ho   | use building  |
|  | 4.1 Getting the technical<br>conditions for connection to<br>the existing infrastructure            | To get those technical conditions, you need to submit an individual request to each public utility company that applies on the plot (connection to the electric grid, water distribution, sewage, natural gas distribution and garbage removal).  | 29.03.<br>2012. | 25.04.<br>2012. | Project<br>manager | Companies for<br>public utilities   |
| 4 Cotting the                              | 4.1.1 Getting the technical<br>conditions and connection to<br>the electric grid                    | Submit an individual request to Electric Company  | 29.03.<br>2012. | 04.04.<br>2012. | Project<br>manager | Electric Company  |
| technical conditions<br>for house building | 4.1.2 Getting the technical<br>conditions and connection to<br>water distribution grid              | Submit an individual request to Water supply Company  | 05.04.<br>2012. | 11.04.<br>2012. | Project<br>manager | Water supply<br>Company   |
|  | 4.1.3 Getting the technical<br>conditions and connection to<br>gas distribution grid                | Submit an individual request to Gas supply Company  | 12.04.<br>2012. | 18.04.<br>2012. | Project<br>manager | Gas supply<br>Company   |
|  | 4.1.4 Getting the technical<br>conditions and signing<br>contract for sewage and<br>garbage removal | Submit an individual request to Company for public utilities  | 19.04.<br>2012. | 25.04.<br>2012. | Project<br>manager | Company for public<br>utilities   |
| 5. objective - Until the t                 | beginning of May 2012. I will find  | a construction firm and sign a preliminary with them  |                 |                 | 1                  |   |
| 5. Finding construction                    | 5.1. Making a list of<br>construction firms with best<br>qualification and prices                   | Using Internet and other sources find a firm with best qualification and prices   | 05.04.<br>2012. | 18.04.<br>2012. | Project<br>manager |   |
| preliminary                                | 5.2. Agreement with the selected firm and the signing of preliminary contract                       | Signing of preliminary contract with selected firm manager and agreement about all activities (start of works, transport, food, tools etc.)   | 19.04.<br>2012. | 02.05.<br>2012. | Project<br>manager | Selested constructiom firm  |

| Activity   | Sub - activity  | Description   | Start date      | End date        | Responsible        | Cooperate                               |
|--|---|---|-----------------|-----------------|--------------------|---|
| 6. objective - Until the I   | beginning of May 2012 I will buy  | all necessary material for starting hause building and stored them on the pl  | lot.            |                 |                    |   |
| 6. Buying all necessary material for   | 6.1. Making a list of<br>construction material<br>companies with best<br>conditions   | Using Internet and other sources find construction material companies with best conditions (prices, quality, transport etc.)                | 29.03.<br>2012. | 04.04.<br>2012. | Project<br>manager | Construction firm manager               |
| starting hause building<br>and storing materials<br>on the plot.   | 6.2 Construction of stockroom for storage tools and materials                         | Construction of stockroom for storage tools and materials to protect against theft and weather conditions                                   | 19.04.<br>2012. | 25.04.<br>2012. | Project<br>manager | Construction firm manager, Workers      |
|  | 6.3 Buying material for starting house building                                       | Buying material for starting house building, transport and storage on the plot  | 26.04.<br>2012. | 02.05.<br>2012. | Project<br>manager | Construction firm<br>manager            |
| <ol><li>objective - By the mi</li></ol>  | ddle of June 2012. all constructo   | or works in "gray" phase will be done.  |                 |                 |                    |   |
|  | 7.1 Plot metering   | Plot metering and setting-up of string pickets in order to mark place of foundation digging   | 02.05.<br>2012. | 02.05.<br>2012. | Project<br>manager | CF manager,<br>Workers                  |
| <ol> <li>Objective - By the mi</li> <li>Constructor works</li> <li>on building till "gray"</li> <li>phase</li> </ol> | 7.2 Digging of foundation   | Machine digging with earth loading and transport to landfill  | 03.05.<br>2012. | 03.05.<br>2012. | Project<br>manager | CF manager,<br>Workers                  |

| Activity  | Risk factor  | Description of impact   | Severity of<br>Impact<br>B | Likelihood of<br>Occurrence<br>A | Rating score<br>AxB | Risk response   |
|---|--|---|----------------------------|----------------------------------|---------------------|---|
|   | It is not possible to find appropriate plot                                      | Inability of finding appropriate plot<br>within the prescribed time and money<br>makes activity very difficult                  | 5                          | 3                                | 15                  | Increase efforts to find appropriate plot   |
|   | Building on the plot is not possible   | If it is not possible to build probably it<br>is agricultural land. Changing the use<br>of plot will increase price of building | 5                          | 3                                | 15                  | Increase efforts to find appropriate plot.<br>Avoid buying or decrease price of plot                  |
| 1. Buying a suitable                                | Problems with vehicular<br>access to plot<br>Problems with shores to<br>networks | Infrastructure problems makes<br>building activities very difficult and<br>causes delays  | 4                          | 3                                | 12                  | Avoid buying or decrease price of plot.<br>After possible buing increase efforts to<br>solve problems |
| plot  | Seller of the plot does not<br>accept the offered price                          | Purchase of plot is impossible If there is no agreement about the price   | 5                          | 3                                | 15                  | Negotiate and try to reduce price of plot.<br>Give up of shopping if negotiations fail                |
|   | Problems with co - users of the plot   | Possible problems with co - users of the plot may linger building   | 3                          | 3                                | 9                   | Preferably solve problems with co- users<br>before buying   |
|   | Problems with municipal services   | Possible problems with municipal services may linger building   | 3                          | 3                                | 9                   | Preferably solve problems with municipal services before buying or right after                        |
|   | Problems with Local<br>community and neighbours                                  | Possible problems with Local<br>community and neighbours may linger<br>building   | 3                          | 3                                | 9                   | Preferably solve problems with Local<br>community and neighbours before buying<br>or right after      |
|   | Credit unworthiness and<br>insufficient loan amount                              | Start of building is impossible in case of credit unworthiness or insufficient loan amount                                      | 5                          | 2                                | 10                  | Try again to get a valid documentation in order to restart the process                                |
| 2. Taking a lone                                    | Loan approval documentation<br>is not collected on time                          | Cause delay of final loan approval  | 4                          | 2                                | 8                   | Increase efforts to collect documentation   |
|   | Delay of final loan approval   | Cause delay of start building   | 4                          | 2                                | 8                   | Increase efforts to solve problems with<br>bank   |
|   | Disapproval of loan  | Start of building is impossible in case of disapproval of loan  | 5                          | 1                                | 5                   | Try again to get a loan.  |
| 3. Obtaining a <sup>P</sup><br>building permit<br>c | Inability to obtain a building permit  | Start of building is impossible in case of Inability to obtain a building permit  | 5                          | 2                                | 10                  | Try again to get a valid documentation in order to restart the process                                |
|   | Delays in building permit obtaining  | Cause delay of start building   | 4                          | 2                                | 8                   | Increase efforts to solve problems with municipal services  |

| Activity   | Risk factor   | Description of impact  | Severity of<br>Impact<br>B | Likelihood of<br>Occurrence<br>A | Rating score<br>AxB | Risk response  |
|--|---|--|----------------------------|----------------------------------|---------------------|--|
| 4. Cotting the   | Inability to obtain some of<br>permits for shores   | Inability to obtain some of permits for<br>shores (especially shores for electric<br>and water grid) can slow works                              | 3                          | 2                                | 6                   | In this part of the project risk is reduced if coditions of the first activities are satisfied |
| technical conditions<br>for house building   | Problems with companies<br>which are in charge for shores<br>to networks                        | Possible problems may cause start building delay.  | 3                          | 2                                | 6                   | Increase efforts to solve problems with<br>companies   |
|  | Delays in permit obtaining for shores   | Delays in permit obtaining for shores may cause start building delay.  | 3                          | 2                                | 6                   | Increase efforts to collect valid<br>documentation and solve problems with<br>companies        |
| 5. Finding<br>construction firm  |   | Inability to find appropriate<br>construction firm within the prescribed<br>time and money may cause start<br>building delay.                    | 3                          | 2                                | 6                   | Increase efforts to find appropriate construction firm   |
| and signing<br>preliminary   | Construction firm does not satisfy conditions   | If construction firm does not satisfy<br>conditions (price, quality) budget can<br>be overrun or quality of hause will be<br>unsatisfactory      | 3                          | 2                                | 6                   | Find another construction firm   |
| 6. Buying all<br>necessary material<br>for starting hause<br>building and storing<br>materials on the<br>plot.         | Construction material does not satisfy conditions   | If construction materials does not<br>satisfy conditions (price, quality)<br>budget can be overrun or quality of<br>hause will be unsatisfactory | 3                          | 2                                | 6                   | Find another construction material firm  |
|  | Bad weather conditions  | Bad weather conditions may cause delay of works  | 2                          | 3                                | 6                   | Orientation on works which are not time<br>effected  |
| 7. Constructor<br>works on building  | Problems with construction<br>firm manager and workers  | Problems with construction firm<br>manager can affect delay of works<br>and bad interpersonal relationships                                      | 3                          | 3                                | 9                   | Improve interpersonal relationships  |
| in gray phase  | Possible problems with<br>municipal services, Local<br>community and neighbours                 | Possible problems may cause delay of works   | 2                          | 3                                | 6                   | Increase efforts to solve problems   |
|  | Problems with construction<br>firm manager and workers  | Problems with construction firm<br>manager can affect delay of works<br>and bad interpersonal relationships                                      | 3                          | 3                                | 9                   | Improve interpersonal relationships  |
| 8. Works related to Pro-<br>elctrical and water wh<br>installation, Lo<br>carpentry, façade ne<br>and heating La<br>ov | Problems with companies<br>which are in charge for shores,<br>Local community and<br>neighbours | Possible problems may cause delay of works   | 2                          | 3                                | 6                   | Increase efforts to solve problems   |
|  | Lack of money due to budget overruns  | Lack of money due to budget overruns<br>in this phase of project could seriously<br>jeopardize the completion of project                         | 5                          | 3                                | 15                  | Take care of expenditure of money. Rig floor and move up, finish later other works             |

| Activity        | Risk factor                                    | Description of impact   | Severity of<br>Impact<br>B | Likelihood of<br>Occurrence<br>A | Rating score<br>AxB | Risk response  |
|-----------------|--|---|----------------------------|----------------------------------|---------------------|--|
|                 | Problems with telephone and cable TV companies | Possible problems have no effect on<br>project  | 1                          | 1                                | 1                   | Move up, solve problems later  |
| 9. Finall works | Lack of money due to budget overruns           | Lack of money due to budget overruns<br>in this phase have minor effect on<br>project | 2                          | 3                                | 6                   | Take care of expenditure of money. Move up, finish later other works |

## LEGEND

| Likelihood of Occurrence (A)              | Severity of Impact (B)                   |
|---|--|
| 1- Very unlikely (hasn't occurred before) | 1 - Insignificant (have no effect)       |
| 2 - Slight (rarely occurs)                | 2 - Minor (little effect)                |
| 3 - Feasible (possible, but not common)   | 3 - Significant (may pose a problem)     |
| 4 - Likely (has before, will again)       | 4 - Major (Will pose a problem)          |
| 5 - Very Likely (occurs frequently)       | 5 - Critical (Immediate action required) |
